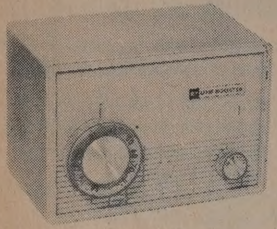
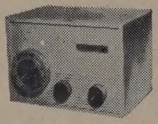
PRODUCTS TO IMPROVE HOME TV RECEPTION

UHF PRODUCTS



U-BOOST ALL-CHANNEL UHF BOOSTER MODEL UTB-1 — Triples the antenna signal voltage (10 db gain) on any UHF channel, 14 to 83. A turn of the dial pinpoints the desired channel, and brings it in sharp and clear. TV picture quality is excellent with the U-Boost, since it amplifies the signal before conversion, delivering the best possible signal-to-noise ratio. An extremely low noise figure and a tuned input contribute to excellent performance. Installation is easy. U-BOOST has an AC convenience receptacle for a UHF converter or an all-channel TV set. Further, 300 ohm twin lead can be connected without stripping or splicing thanks to patented Blonder-Tongue stripless 300 ohm terminals. The U-Boost's handsome modern styling matches the new Blonder-Tongue UHF converters. Net **$24.10**

ULTRAVERTER UHF CONVERTER Model BTU-2T



Deluxe two-tube converter with low-noise frame-grid IF amplifier. Tunes UHF channels 14 to 83. For all UHF receiving areas, especially fringe and translator applications. Has 5 to 8 db gain. Output on channel 5 or 6. Features stripless 300 ohm terminals, speed and fine tuning knobs, shielded three sections "ultra tuner," pilot light. Net **$28.95**

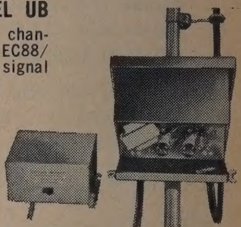
UHF CONVERTER Model 99S

Supplies UHF reception for VHF receivers in primary signal areas. Tunes complete UHF range from 470 to 890 mc. Converts to VHF channel 5 or 6. Features three section tuners; 300 ohm stripless VHF and UHF terminals, and drift-compensated circuitry. Net **$19.50**

AMPLIVERTER UHF CONVERTER, Model BT-70B

Similar to BTU-2 but designed especially for translator and MPATI area conversions. Low noise. Vernier tuning. Net **$32.30**

UHF MAST-MOUNTED BOOSTER, MODEL UB



Six standard models cover specific UHF channels from 14 to 83. Uses two low-noise EC88/6DL4 frame-grid tubes, which increase signal voltage by at least 14 db. Remote AC power supply sends at least 14 db. Remote AC power supply sends a safe 24 volts to the mast-mounted amplifier on the same down-lead that conducts the signal. Automatically shuts off when most TV receivers are turned off. 300 ohm stripless terminals. Net **$66.00**

UBP Similar to UB but 300 ohm input, 75 ohm output.
UBC Custom UB. Choice of frequency ranges and connectors.

UHF-VHF ANTENNA COUPLER MODEL A-107

Combines UHF and VHF antennas, or provides separate VHF and UHF output from a single antennna. Isolation: 15 db. Net **$3.15**

UHF HYBRID COUPLER MODEL UDC-1

UHF 300 ohm hybrid coupler. Channels 70-83 only. Net **$3.60**

EXACT-MATCH COUPLERS

4-SET COUPLER, COLOR-4 — Super deluxe 4-set coupler, especially for Color TV. Offers maximum interset isolation (16 to 24 db), excellent impedance match and only a 6.5 db insertion loss. The Color-4 uses ferrite broadband transformers in balanced bridge design and it has a VSWR of less than 1.5. PRODUCTS TO IMPROVE HOME TV RECEPTION

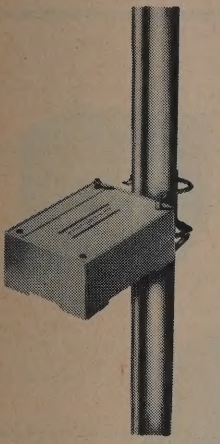
MAST-MOUNTED SIGNAL BOOSTERS

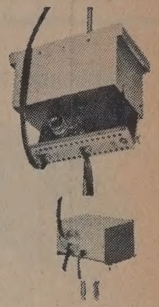


TRANSISTOR MAST-MOUNTED TV/FM BOOSTER ABLE-2 — Has all the power needed to bring in weak channels without overloading on strong channels. Delivers sharp, clear reception to as many as 3 TV or FM sets. It delivers interference free, full power to each set — no ghosts, no snow. Signal voltage from antenna is increased up to 8 times for one set; 5 times 2 sets; 3 times for 3 sets. On FM stereo, where signals are 30% weaker than on regular FM, the added power means full stereo enjoyment. Takes seconds to snap the ingenious 'Miracle Mount' on any antenna mast — no bolts, no straps, no hardware. Patented stripless 300 ohm terminals at amplifier and remote supply assure positive connection with just a turn of a screwdriver — no cutting or stripping twinlead. Net **$28.75**

ABLE-1 — Top Quality mast mounted 3-set TV/FM booster similar to ABLE-2 but with only one transistor. Recommended for weak signal areas only. Net **$25.95**

MODEL AB-4 — Same as ABLE-1 except with battery power supply that uses 4 low-cost flashlight batteries. Net **$21.25**

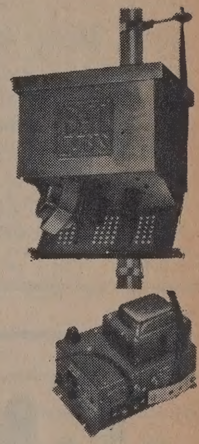
TUBED VHF TV BOOSTER, Model AB-2 (with RP-2 remote power supply) — All-channel VHF booster mounted at the antenna, is housed in weatherproof housing, and can be located 500 ft. from remote on-off control at TV set. Provides more than 9 db gain on all VHF channels. Signal down lead carries AC power up to the amplifier and also conducts the amlified signal to the set. Uses frame-grid 6JD8 tube for highest signal-to-noise ratio. Convenient swing down case simplifies maintenance. Employs 300 ohm, stripless terminals. Net **$34.95**



MODEL AB-3 MAST-MOUNTED TV/FM AMPLIFIER (with remote power supply)

MODEL AB-3 — Low-noise amplifier virtually eliminates snow. Can be used in a fringe area home installation, or as a pre-amplifier in a master TV system.

The remote power supply sends AC power up to the mast mounted amplifier on the same down-lead that carries the antenna signal down. It provides the correct power to the amplifier for any length of connecting cable up to one mile (when open twin-lead is used). Amplifier uses low noise frame-grid tubes. Provides 25 db minimum gain on all VHF-TV and FM stations. Choice of 300 ohm or 75 ohm output. Stripless terminals for 300 ohm twinlead; solderless "quick-disconnect" terminals for 75 ohm coax. No balun is needed because the input is matched to 300 ohm antennas. Net **$75.00**

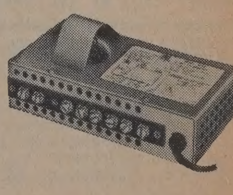


IN-THE-HOME SIGNAL BOOSTERS

TRANSISTOR 4-SET TV/FM BOOSTER, MODEL IT-4 — The IT-4 "Quadrabooster," designed around a rugged, long-life transistor, is very inexpensive to operate and requires almost no maintenance. The transistor takes so little power that it need never be turned off. Specially designed for weak signal areas, the "Quadrabooster" provides crisp, brilliant pictures for as many as four TV or FM sets from a single antenna. Used for one set it increases signal strength 3 to 8 times. Used for two, three or four sets, it has amplifying power to spare and provides necessary isolation between sets. Net **$20.95**

2-SET TV/FM BOOSTER, MODEL B-42 Low-cost combination booster-distribution system provides clear, sharp reception for up to 2 TV or FM sets from one antenna. The B-42 more than doubles signal voltage for a single set, with excellent isolation. Its frame-grid tube amplifier is ideal where there are both strong and weak signals because it can handle strong signals without overloading.

4-SET TV/FM BOOSTER, MODEL B-24c Triples signal power to one set. Also acts as an amplified coupler to operate up to 4 TV or FM sets. Provides proper impedance match and isolation between sets and increases picture power when used with 2 or 3 sets. With 4 sets it insures that each TV or FM set receives more than 90% of the signal power picked up by the antenna. Net **$17.25**



FM STEREOBOOSTER, FMB — Covers the entire FM band, increases signal strength up to 8 times prior to the signal entering the tuner or radio. This assures the most powerful, distortion-free reception. Extremely low noise figure — absolutely essential in FM stereo where overall signal-to-noise ratio may be degraded by a factor of 20 db or more over regular FM reception. Signal handling capability — won't overload when there are strong local stations present. Low VSWR eliminates distortion resulting from phase and amplitude variation and standing waves caused by impedance mismatch. Compact, easy to install anywhere indoors — near the FM tuner or radio, on the base board. Net **$14.55**

An MCSc is available for each VHF channel and the MCSc-FM covers the entire FM band. Each MCSc has a built-in, fuse-protected power supply. MCSc units also have built-in mixing networks so that the output of each MCSc in a system may be plugged into the next MCSc; at the final output all of the channels are being fed into one coaxial cable.

AGC action enables MCSc units to provide uniform outputs even though the strengths of the inputs vary. Two operating controls (Gain & AGC) increase the versatility of these amplifiers.

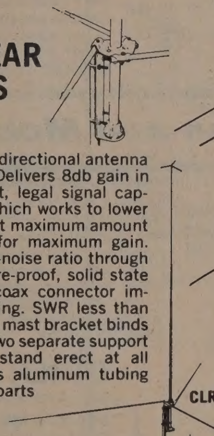
HY-GAIN COLINEAR GROUND PLANES



NEW HY-GAIN CLR II

Here's the most efficient omni-directional antenna ever made for Citizens Band. Delivers 8db gain in all directions. Features largest, legal signal capture aperture in the industry which works to lower the angle of radiation and direct maximum amount of energy along the horizon for maximum gain. 6db gain in improved signal-to-noise ratio through built-in static arrestor. Moisture-proof, solid state matcher. Recessed 52 ohm coax connector imbedded in moisture-safe housing. SWR less than 1.2:1. Twelve-inch heavy gauge mast bracket binds antenna and mast securely at two separate support points—insures antenna will stand erect at all times. Taper swaged seamless aluminum tubing reduces wind load. All metal parts iridite treated to MIL specs. Molded high impact polystyron insulators totally impervious to weather are mounted under compression—never under strain. Installs quickly and easily—15 minutes from carton to contact. Radiator, 19′10"; radials, 9′.

HY-GAIN MOBILE "TOPPERS" FOR CITIZENS BAND

All "Toppers" feature exclusive Hy-Gain top loaded design with a thin-line loading coil permanently encapsulated in polyethylene plastic at the top of the antenna for optimal radiation efficiency. The slim, sleek "Toppers" offer several outstanding performance and mechanical advantages over what you get with bulky base loaded and center loaded antennas. Since 78% of the radiation is from the lower ⅛-wave length of the antenna, top loading provides the least amount of compromise involved in a shortened antenna. Another advantage is that top loading raises the base impedance of 50 ohms and provides an optimum transfer of energy between the antenna and the transmission line for maximum efficiency.

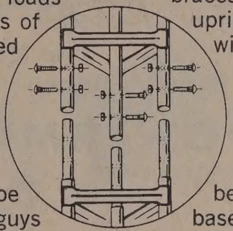
SELF-SUPPORTING UP TO 60 FEET HIGH
HOT DIP GALVANIZED HEAVY DUTY MODELS
ZINC ELECTROPLATED ECONOMY MODELS
NO LOST TOWER FOOTAGE
FAST, EASY SECTIONAL ERECTING

With these two Jontz Tower models you can fill any tower needs . . . from small suburban to heavy-duty commercial installations. Sectional construction and special drive-in bases make erection fast and simple. The Zinc Electroplated Economy Model No. 300 will easily withstand high wind loads normally encountered in most parts of the country. The Hot Dip Galvanized Heavy Duty Model No. 500 will withstand hurricane force winds having been tested at wind loads of 80 mph.

Both models are self-supporting up to 60 feet high. Model 300 can be extended to 200 ft. by use of guys every 20 feet and Model 500 up to 500 ft. by use of guys every 20 feet. There is no lost tower footage when mounting in either concrete or the special drive-in base. Since the tower is separate from the base, it may be moved to another location without impairing strength.

Both towers are fabricated in 10'0" sections and can be erected in one piece or by sections. Model 300 is made from ¼" x 18 ga. tubular uprights and is zinc electroplated and dipped in clear Butyrate lacquer. The Model 500 is made from 1¼" x 16 ga. tubular uprights and is hot dip galvanized. (Model 300 is also available galvanized.) New, extra-wide corrugated crossbraces give 75% more weld contact with uprights. Tower sections lock together with 2 self-locking ⅜" bolts in each leg. The splined bolts prevent thread damage and stop hole stretch when tower moves in the wind.



HOW TO ORDER: 1. Specify if to be mounted in concrete or drive-in base. 2. Order by specific sections, starting at the base. See illustration for section numbers. 3. If Model 300 is wanted with galvanized finish be sure to specify.

SHIPPING: For best freight rates, 40 ft. and over towers will be shipped in section combinations permitting 2 telescoped bundles, unless otherwise specified. (Example: a 60 ft. tower will consist of section A, C, D, E, and 2 F's.)

JERROLD® TV-FM RECEPTION AIDS FOR THE HOME

NEW! SUPER POWERMATE

Model SPM-102

A two-transistor TV preamplifier with up to 700,000 microvolts output! Its high gain-overload characteristics let you pick up fringe signals even though powerful local TV and FM stations are "in your back yard." Cross-modulation, and resulting herringbone distortion is beaten.

The gain-overload specifications of the Jerrold Transistorized Super-Powermate are the best yet for inexpensive, antenna-mounting preamplifiers—specs that cannot be met by the low-gain nuvistor type circuits.

The Super-Powermate has the extremely flat frequency response so necessary for color reception—a deviation of 0.6 db over the entire low band, and only 0.2 db on the high band.

The noise figure of the Super-Powermate is excellent. Listed below are the average noise figures—variations due to individual transistors will not be more than ± 1½ db from these figures.

Channel 2—4.31 db
Channel 3—4.35 db
Channel 4—4.35 db
Channel 5—3.90 db
Channel 6—3.79 db
Channel 7—7.04 db
Channel 8—7.25 db
Channel 9—7.75 db
Channel 10—6.92 db
Channel 11—6.68 db
Channel 12—6.98 db
Channel 13—7.17 db

The Super-Powermate is mounted on the antenna boom for maximum transfer of antenna energy—before any downlead losses can occur. It performs well with any TV antenna and any receiver. The transistors, of course, mean no tube replacements. Power line operated, no battery nuisance or expense. Remote power supply has dual outputs.

Model TA-66

2 TRANSISTOR FOUR-SET AMPLIFIED TV COUPLER

A four-set 2-transistor amplified TV coupler with high gain-overload to **all** outputs—an engineering breakthrough for solid state devices. Low power consumption—no heat dissipation to worry about—flat, low-silhoutte plastic case—fully-isolated ac power supply—no shock hazard. Will greatly improve reception of weak fringe-area stations without cross-modulation due to stronger local signals—no traps or stubs are necessary in most areas. Noise figure is 4.2 db over the low band, 8.3 db over the high band.

The TA-66 uses the same engineering principles which produced the Super-Powermate two-transistor antenna-mounted preamplifier, and has the same excellent performance characteristics. No other transistorized amplified coupler equals this one in input overload, gain and output capability.

The four-set terminals are so arranged that two or three sets may be connected instead of four, and increased gain is attained with each reduction in the number of sets connected—no linkages to add, no circuits to change. Features Jerrold's new strip or no-strip crown washers. Net $22.95

JERROLD®

ANTENNA SPLITTER

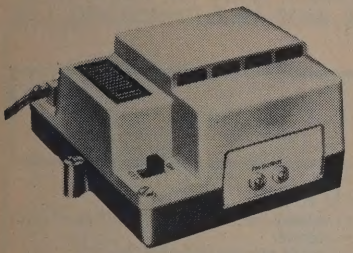
(Model TX-FM)

The Antenna Splitter is designed to draw FM signals from an existing all-band vhf television antenna and feed them to an FM receiver. It is not a coupler, but a compact triple-tuned band-pass filter which cleanly separates the FM and TV signals, and, with a negligible loss of 1 db, sends only the FM signal to an FM monaural or multi-plex tuner and virtually all the TV signal to the television set. This minute loss is especially important with FM multi-plex tuners because the relatively weak stereo signal can ill afford to be further weakened.

The tough plastic housing of the Antenna Splitter is only 4¼" x 1¾" x 1$\frac{3}{16}$", so that the unit can be unobtrusively mounted to the back of a TV set. It can also be mounted outdoors on the TV antenna mast or at any other convenient point between the antenna and the receiver. Net $3.95

FM RANGE EXTENDER

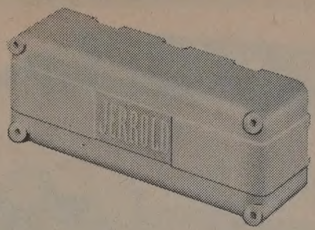
(Model FMX)



The Range Extender is a 20 db FM signal preamplifier containing its own built-in power supply. Especially useful for FM stereo reception since, with the average receiver, the effective range of a stereo broadcast signal is approximately half that of a monaural signal. Therefore, although the signal may be received, it may not be strong enough to activate the limiter stages in the receiver. The result is noisy reproduction. The FM Range Extender strengthens the signal voltage by 20 decibels (10 times) so that the limiters can trim off this noise. Net $18.95

NEW HIGH PASS FILTER

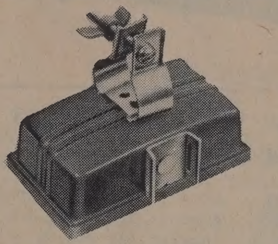
(Model TX-HP)



A high-pass filter to block any interfering signals such as amateur radio, taxicab transmitters, police transmitters or paging systems operating below 50 mc. Attenuation of signals is more than 25 db at 47 mcs, with only 0.5 db insertion loss. Net $3.57

FM/TV FILTER TRAP

(Models 1435-FM and 1435-*)



Models 1435-FM and 1435-* are wide-band, sharp cut-off traps that attenuate the FM band or individual TV channels a minimum of 20 db. They may be used with either amplified or non-amplified antennas and are mounted directly on the antenna crossarm to trap out the signal before it is amplified. Net $4.77

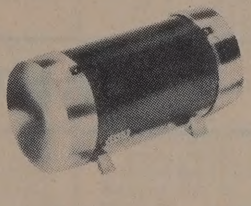
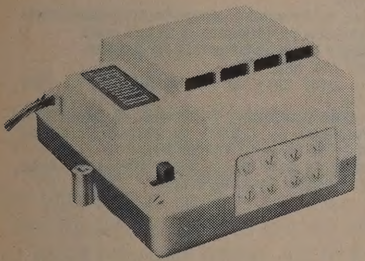
"TRAP-EASE" TUNABLE INTERFERENCE TRAPS

(Models HQ-91 and HQ-92)



"Trap-Ease" knocks out adjacent channel interference. This tunable "deep notch" antenna trap (greater than 50 db) permits TV viewers to remove "beat" or "herringbone" patterns caused by adjacent channel sound or video carriers. Permits clear reception of weak, distant stations normally blocked by a strong local channel.

Model HQ-91	**Low**	**"Trap-Ease"**—Covers Ch. 2-6.	Net $11.97
Model HQ-92	**High**	**"Trap-Ease"**—Covers Ch. 7-13.	Net $11.97



4-SET TV-FM AMPLIFIED COUPLER

(Model HSA-44A)

A precision-engineered amplifier with built-in coupler serving up to four TV and/or FM sets with a **minimum** of ½ db gain at each output—better than having four separate antennas, one for each set. Single-tube circuitry for economy—requires only 10 watts. Built for 24-hour continuous operation. Powered from 117 v, 60 cycle ac. Net $18.95

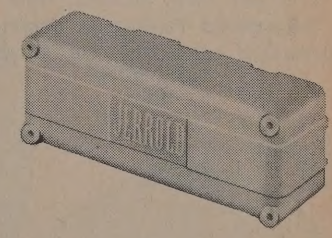
"LOW LOSS" MULTI-SET TV-FM COUPLERS

Jerrold multi-set couplers allow connection of 2, 3, or 4 television and/or FM receivers to a common antenna array. All models feature positive matching, extremely low forward loss and high isolation. Housed in rugged plastic case and equipped with "no-strip" serrated washers.

Model M-2 Two-Set Coupler (for Strong UHF and VHF Signal Areas)—Inductively compensated with emphasis on positive matching for reduction of ghosting and smear. Net $2.10

Model MF-2 Two-Set Coupler (for VHF Fringe Areas)—For use where forward losses must be held to a bare minimum. Has highly-efficient transformer design and positive matching. Net $2.70

Model MF-4 Four-Set Coupler (for All VHF Areas)—Has same basic circuit as Model MF-2, but designed for use in feeding 3 or 4 sets from one antenna. Net $3.45



TV-FM MAGIC CARPET ANTENNA

(Model MK-1)

Truly a "Magic Carpet" carrying quality TV-FM signals to receivers in the home, the Model MK-1 is easily installed (lay it on any flat, horizontal surface in the attic, or under a rug, or staple it to a ceiling) and simple to orientate (shift its position for best reception). The Magic Carpet eliminates the unsightliness and maintenance costs of outdoor antennas and, when properly installed, provides reception comparable to a standard broadband conical antenna mounted in the same location.

Shipped complete with 6 plastic strap insulators and 25 feet of twin-lead. Dimensions—74" x 24". Net $5.97

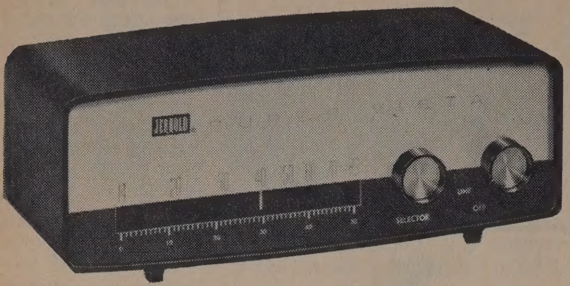
JERROLD® NEW TOP-OF-THE-SET UHF CONVERTERS



- **Two Models for converting all uhf channels, 14 to 38**
- **Special model for MPATI and translator channels, 70 to 83**
- **All units feature nuvistor oscillator for fast warm-up and no-drift performance**

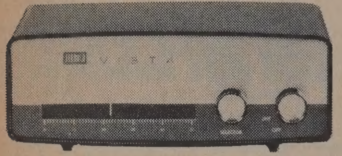
These decorator-styled uhf converters blend well with any room decor, feature 12-second warm-up time and no-drift circuitry. Turn the converter on in the morning, it warms up quickly—needs no re-adjustment. The channel the converter was tuned to the night before comes in sharp and clear. And selecting another uhf channel is as easy as tuning an AM radio because of the slide-rule dial.

Super-Vista UHF Converter for Channels 14 to 83 (Model SVC-560)

An exceptionally high-gain low-noise converter, the Super-Vista has been engineered to provide top-flight reception of all uhf channels in both strong and weak signal areas. The post amplifier, operating at channel 5 or 6, is a reliable high-frequency transistor selected for its low-noise figure. The oscillator is a nuvistor chosen for both reliability and long life, since tube failure in this circuit has been a major bugaboo with many other uhf converters. Exact 300-ohm output and input impedance match means full signal conversion. Frequency range is 470 to 890 mc, covering all channels from 14 to 83. Size: 11" x 6" x 4". Operates from 110-120 v, 60 cycle ac. Net 29.95

Vista UHF Converter for Channels 14 to 83

(Model VC-100)

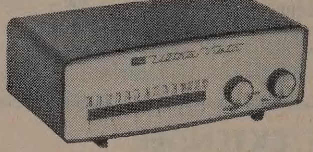


Economical, Vista uhf converter gives the strong-signal-area resident all uhf stations through channels 5 or 6 of a television set. Nuvistor oscillator with long life and high reliability eliminates the problem of tube failure in this circuit — the plague of many other uhf converters. Frequency range is 470 to 890 mc, covering channels 14 to 83. Net 20.95

Ultra-Vista UHF Converter for Channels 70 to 83

(Model UVC-7083)

(With Exclusive Built In UHF Preamplifier Stage)



Ultra-sensitive Ultra-Vista UHF Converter — specifically designed for MPATI and translator areas — not only amplifies the vhf signal but preamplifies the uhf signals to deliver unmatched reception. Frame-grid tube amplifies uhf antenna signals before they reach the mixer diode — a silicon crystal chosen for low noise figure and reliability. Nuvistor oscillator for continuing dependable service. Post amplifier is high-frequency transistor which operates at channel 7 or 8. Frequency range is 806 to 890 mc, covering channels 70 to 83. Net 34.95

THE J3065 SERIES OF RUGGEDIZED UHF PARABOLIC ANTENNAS

Available in either 75-ohm or 300-ohm impedances, the J3065 series uhf antennas are high-gain, highly-directional, especially-rugged units designed for fringe and super-fringe reception of uhf stations up to channel 83, including MPATI channels 72 and 76. Gain is 14 db at 470 mc, rising to 17 db at 890 mc over a tuned reference dipole—up to three times the signal voltage from a regular corner reflector or a 4-element bow-tie array. Front-to-back ratio is 20 db or better. The 4 ft. diameter reflector is made of ⅛″ steel wires spaced only 1″ apart and welded to ¼″ thick cross-members and outer ring. The entire dish is coated with a heavy vinyl plastic layer applied over an anti-oxide primer. These antennas, designed to withstand 100 mile per hour winds, heavy icing and corrosive action of salt spray or polluted atmospheres, are a "must" for systems that are scheduled to receive uhf broadcasts under the most adverse conditions.

Mast-Mounted "De-Snower" Model DSA-132 with Remote Power Supply

"DE-SNOWER"® PREAMPLIFIER (VHF)

JERROLD "De-Snower" preamplifiers provide the high gain and low noise figure necessary to deliver "snow-free" TV pictures and "hiss-free" FM sound to your TV/FM receiver. These mast-mounted units bring your TV/FM tuner to the antenna to take full advantage of extremely weak signals by overcoming noise pick-up and antenna lead-in losses.

Each "De-Snower" is shipped with a remote power supply (to be placed at any easily-accessible location) which provides low-voltage ac power to the preamplifier and acts as a feed-thru for amplified signal from the preamplifier to the receiver. Only one cable is necessary to carry ac power up to and amplified signal down from the preamplifier to the power supply.

"De-Snower" preamplifiers will improve color TV reception and boost TV/FM signal strengths in all fringe areas. See SPECIFICATIONS chart to determine which model is best suited for your particular needs.

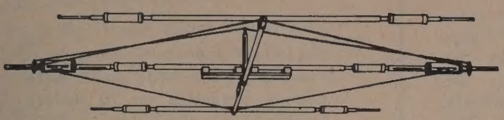
TA-40K



TA-3340

FOR 10 15 20 & 40 Meters

Only a few minutes are required to convert the Mosley TA-33 Trapmaster Beam for operation on 40 meters. When installed on the driven element, the TA-40K will exhibit a typical figure eight pattern obtained from a half wave antenna yet 10, 15 and 20 meter operation is virtually uneffected. TA-40K incorporates the famous construction and design features used in the Mosley Trapmaster Antennas which assure years of trouble-free performance. Because of the mechanical strength of some antennas as well as the differences in electrical design, the TA-40K is not recommended for use on any antenna other than Mosley Trapmaster. TA-40K contains radiator traps and all necessary hardware. Mosley TA-40K and Mosley TA-33 can be ordered as a complete antenna package. Mosley TA-3340. TA-40K operates as a ½ wave rotatanle dipole on 40 meter.

SKYMASTER COAX ANTENNA

Skymaster gives you a lower "radiation angle" of your antenna for a better contact for vertically polarized stations in the citizens band. The Skymaster has a nominal impedance of 72 ohms, used with 72 ohm cable. Matches RG59/U coax cable for perfect match to most transmitters and improves receiving.

Both radiator and skirt are of heavy-gauge aluminum tubing, and a resilient machined polyethylene insulator is used for low weight and high strength. Silver-plated coax connector is used for easier connection and lowest SWR.

- **Easily installed on any existing mount**
- **Concentrated signal for best coverage**
- **Perfect match for transmitting and receiving.**

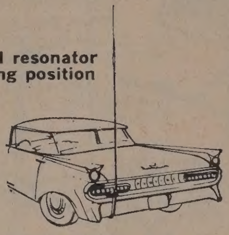
Mast and resonator folded over



Mast and resonator in mobiling position

One mast and five resonators permit operating on any of five bands with exceptional results. Fold over aluminum mast is 54″ long. When opened to full length, the two sections of the mast are rigidly held in a vertical position. Each resonator has a special coil for maximum radiating efficiency. Tuning for center frequency is by the adjustable stainless steel rod of the resonator. Mast has ⅜-24 base stud to fit all standard mobile mounts. SWR is less than 2 to 1 for any center frequency setting within the band as follows: 10m., 100 to 120 kc; 15m., 100 to 120 kc; 20m., 80 to 100 kc; 40m., 40 to 50 kc; 75m., 25 to 30 kc (all approximation). Power rating: AM-DC input 75 watts; SSB-DC input 300 watts PEP. NO NEED FOR MATCHING DEVICES. USE ANY FEED LINE LENGTH OF 52 OHM CABLE.

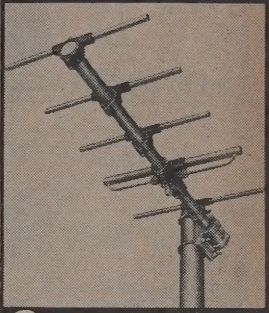
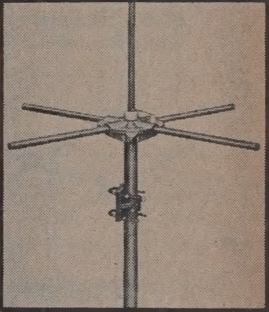
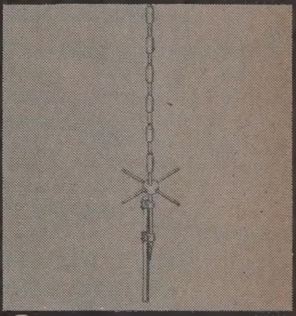
① MODEL CA5-150



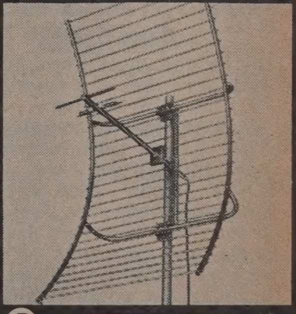
② MODEL CA5-450



③ MODEL GPC-150

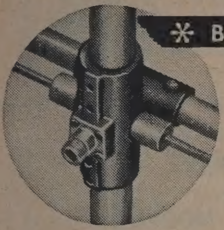


④ MODEL OG-6



⑤ MODEL PR-450

Why you get better performance with Scala Antennas—



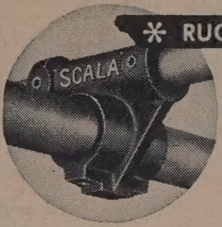
✱ BUILT-IN BALUN

(pat. pending)

Provides a balanced feed system assuring equal distribution of current to the driven element, greater electrical and mechanical stability. The balun allows the driven element to be supported by metal and eliminates the necessity of using the insulator as a mechanical support.

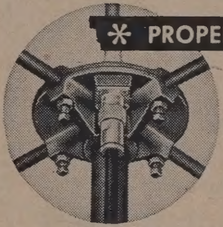
✱ BUILT-IN HEATER

Most of the antennas described below can be obtained with a 24 volt heating system for maximum weather protection and assured winter operation.



✱ RUGGED CONSTRUCTION

Elements are supported by machined castings providing a larger support area, damping vibrations and reducing the concentration of stress and metal fatigue. Mechanical splices are never used. All units are available in metals other than aluminum if desired.



✱ PROPER STRUCTURAL DESIGN

A machined casting, webbed for extra strength and structural support is used to hold parasitic elements in the ground plane antenna. Set screws and lock nuts provide simple assembly and easy installation.

✱ TESTING AND INSPECTION

Each antenna is tested twice for impedance match—once during manufacture and again prior to dis-assembling for shipment. New models are field-tested for one year before released for production.

**Shipped complete—all U-bolt mounting clamps and brackets are included. Unit is ready for installation.*

① YAGI—VHF

The Scala Model CA5-150 is a 52-ohm 5 element yagi. Nine db gain on the major lobe is assured by careful design and Scala's exclusive feed system which eliminates radiation from the feed line and provides equal distribution of current to the driven element. The VSWR is less than 1.3 to 1. For complete weatherproofing and year-around operation, the boom can be provided with a 24 v heater. The unit is annodized and dichromate sealed.

② YAGI—UHF

The Scala Model CA5-450 general communications antenna is a product of years of extensive research. Its construction is possible only because of developments in foam plastics and Teflon insulated cable. A Teflon insulated balun is located within a chamber filled with a special foam plastic for complete moisture and corrosion protection. High strength 7/16" solid aluminum rod is used for the parasitic elements. VSWR is less than 1.3 to·1. Gain is 10 db. Two units may be mounted in an array for an increase in gain up to 3 db and greater directivity. Shipped completely assembled, the unit is annodized and dichromate sealed.

③ GROUND-PLANE—40-170 MC

The Scala Model GPC-150 ground-plane antenna is ideal for non-directional, all weather communications. It is the first ground-plane antenna that can be obtained with 24 v heaters throughout—including the radial elements, providing a completely weatherproof and safe year-round operating antenna. Another version of this unit, comes equipped with a reflector and provides a cardioid radiation pattern with increased gain. In all cases the VSWR is less than 1.3 to 1. The unit is annodized and dichromate sealed.

④ OMNI-DIRECTIONAL GAIN ANTENNAS

Scala's Omni-Directional Gain Antennas—150 Mc and 450 Mc—use half-wave independently fed radiators. Model OD-4 (150 Mc) provides 4 db plus gain over dipole; Model OD-6 (450 Mc) 6 db plus gain over dipole. All elements at DC ground supported by metal. Extremely rugged anodized aluminum construction. Shipped ready for installation.

⑤ PARAFLECTOR®—350-1000 MC

The Scala Model PR-450 Paraflector® is a major contribution toward the improvement of antenna construction and performance in the 350 to 1000 mc range. Essentially, a parabolic section in one plane, the driver is positioned to approach a point source. Over the 350 to 1000 mc range, the Paraflector® is equal to a parabolic dish of the same aperture and has the advantage of lower cost, lighter weight, ease of assembly, installation and rugged construction.

EXACTING DESIGN—TESTED MATERIALS—PRECISION MANUFACTURE

In addition to the antennas described above, and other standard communications, telemetering and community systems, Scala maintains a complete engineering service to design and manufacture special antennas to your specific requirements.

NEW MIRACLE REFLECTOR YAGIS

The finest, most powerful and best performing TV antennas on the market. Ideal for color reception. Covers all VHF channels, 2 through 13. The Miracle Reflector system consists of one reflector spaced 0.15 wavelength behind, and in the same plane as the rear driven element of the array; two reflectors are mounted above and below the driven element. 0.10 wavelength behind it. The two reflectors are spaced like the first two elements in a corner reflector, but are non-resonant and tuned for high directivity. In this way, the finest possible front-to-back ratio is achieved across the maximum number of channels. Antennas feature all-aluminum construction with 1" boom and ¾" dipoles with reinforced elements where required. Powerful "Sure-Grip" mast clamp and positive spring-loaded elements clamps. Reflector reinforced with aluminum dowels. Low wind resistance.

Tenna Model TM-711 Broadband Array—Ideal for low signal strength areas where co-channel interference occurs. Front-to-back ratio, 20:1; some channels 40:1. Aluminum finish. Shpg. Wt., 10 lbs.

Tenna Model TM-78A Broadband Yagi—Gold anodized finish, compound array with seven active low-band elements; eight active high-band elements. Front-to-back ratio 40:1. Shpg. wt., 8½ lbs.

ROOM STATUS CONTROLS

ONE MODEL OPERATES WITHOUT CONNECTION TO GUEST ROOMS. TWO OTHERS REQUIRE ONLY ONE CONTROL WIRE PER ROOM.

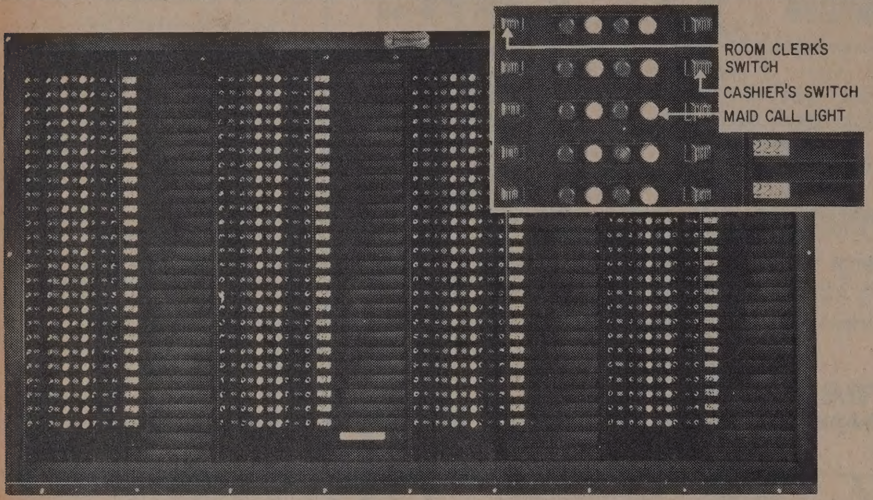

Fig. A. Leamertronic No. A-L2-2/100 Manual Status Control, 100 rooms. This Room Clerk/Cashier Combination Panel has two separate columns of switches, a Registration File, and Maid Call lights (see insert). Up to 1,000 or more, rooms can be accommodated, upon order. Steel panel is hinged.

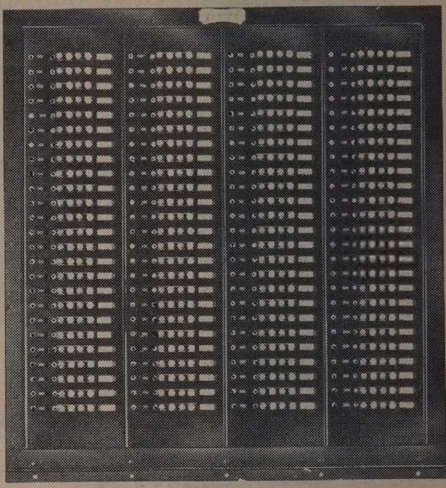

Fig. B. No. A-L2-2/100 — Housekeeper panel. Hinged at base of frame, like Combination panel (left). **No. A-L3** would have nearly same appearance; **No. A-L1**, with only 3 lights; would be slightly less wide. Panel may be Console, Surface, or Flush mounted.

AMERICAN COMMUNICATIONS CORPORATION builds **Status Controls** to suit a variety of uses. Originally designed to speed room rentals in hotels and motels, special models may serve other needs for instantaneous sequential control and monitoring in hospitals (for bed status, between Head Nurse, Cashier and Housekeeper); factories, laboratories (production, process control); missile centers (data checkout); etc. ***Literature available.***

Green light indicates to Front Office, Cashier and Housekeeper that a room is Available; **yellow, that** room is Occupied; **red**, that room is On Change. **White (No. A-L3** model), Maid signal.

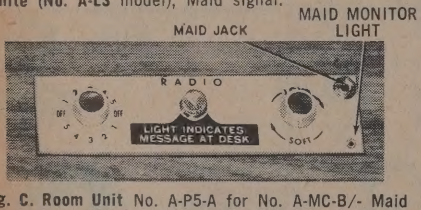

Fig. C. Room Unit No. A-P5-A for No. A-MC-B/- Maid Call System. "Blink Light" confirms Maid's signals.

Color switching (status control) is accomplished by the flick of a switch. Each office may have its own Control, with 3 (or 4) lights and a switch for each room, or Front Office and Cashier may share a Combination Board, or panel, Fig. A; only Front Office section has name Registration File. Monitor Boards (lamps only) can show management the rental status at all times; Housekeeper Board is Fig. B.

Where System wires into guest room a Room Unit (2-gang plate w/jack, and perhaps lamp) is supplied for each room; or, where the wiring of an existing facility is used, for economy, Room Unit may be made part of present plate, as Fig. C or the ultra-modern type, Fig. D, with TV remote control.

Manual Room Status Controls NO RELAYS USED!

A-L1-2 (2 board), **A L1-3** (3 board), 3 light. Is not connected to rooms by wire.

NEW 4-LIGHT and "BLINK LIGHT" MODELS feature MAID CONTROL:

A-L2-2 (2 board), **A-L2-3** (3 board), 4 light. Connected to guest rooms by wire. Room Unit has jack only; Front Office and Housekeeper Controls have a 4th light that shows "white" when Maid plugs into room jack (Maid can then be paged in this room, over room radio speaker, by Housekeeper or Front Office), if paging is provided for.

A-L3-2 (2 board), **A-L3-3** (3 board), 4 light. Wired to guest rooms. Room Unit has jack **and** light; Front Office and Housekeeper Controls have a 4th light. **Both** lights blink "white" when Maid plugs into room jack (Maid can then be paged, if paging has been provided for), and change to **steady** the instant Maid signals, **by plugging further into jack**, that room is ready. See Fig. B.

(†) **Manual — A-L1-2/-, $35.00; A-L1-3/-, $40.00.**
***A-L2-2/-, $44.90; *A-L2-3/-, $49.75.**
***A-L3-2/-, $51.80; *A-L3-3/-, $56.95.**

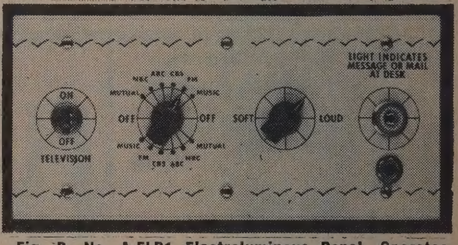

Fig. D. No. A-ELP1 Electroluminous Panel. Operates on A-C. Diffuses a night-light glow in room. Mounts on standard outlet box. **Manufactured to order.**

(†) Priced per room, up to 100 rooms; less cable, but with Room Units where used (*Models A-L2 and A-L3).

MAID CALL SYSTEMS

No. A-MC-A/- is **Visual type.** Maid plugs into room jack, which lights a lamp on a Light Panel in Housekeeper's office. Maid can then be paged if installation includes paging facility. Light goes out when Maid removes plug from jack. This System Includes Room Jacks, Maid Plugs, No. A-MC Light Panel (with lamps only), and Power Supply.

No. A-MC-B/- *Blink Light type. This newest design makes room recovery extremely rapid, through its amazing Maid Monitor and Housekeeper "Blink Lights."

Soon as Maid enters guest room she plugs into Maid Jack on Room Unit. Immediately, a tiny light under the jack slowly blinks on and off; at the same time, a second light blinks on Housekeeper's Light Panel, indicating "Maid in room." Housekeeper can now page Maid if paging is provided.

When Maid has readied room, she plugs all the way into room jack, then removes plug. Maid's light now goes out but Housekeeper's light changes to steady-on ←"room ready"; she can switch light off at her convenience (but circuit will accept Maid's next signal).

Installation includes Room Jacks, Maid Plugs, **No. A-MC1/-** Light Panel (with lamps and switches), Power Supply, Blinker Unit.

Room Clerk can use a **No. A-MC** Light Panel to monitor room status shown on Housekeeper panel.

SPECIFICATIONS

Maid Call Light Panels are built for Desk, Flush, or Surface mounting, in sizes to suit needs. Material: steel; standard finish: gray Hammertone enamel. Designation strips identify rooms. Lamps have long operating life, on 24 V. circuit.

Net Prices (Discounts on larger units.)

No. A-MC-A/- Maid Call System, w/No. A-MC Light Panel, Power Supply, and 1 Maid Plug per 10 rooms, but less Room Unit, **$5.00 per room.**

No. A-MC-B/- Maid Call System, w/No. A-MC1 Light Panel, Power Supply, Blinker Unit, and 1 Maid Plug per 10 rooms, but less Room Unit, **$8.50 per room.** Prices are for up to 100 rooms.

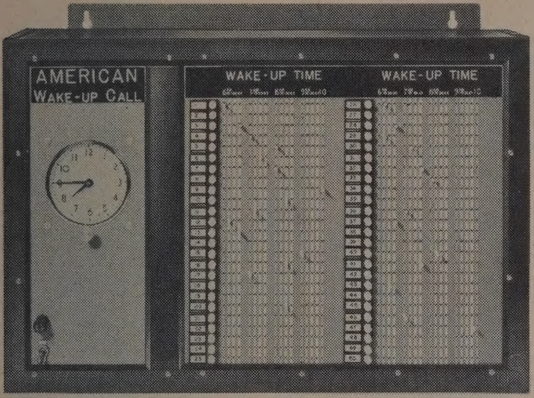
*AUTOMATIC
WAKE-UP CALL



AMERICAN'S new **No. A-WA-1/-** Wake-up Call is available in Console, Surface (illustrated), or Flush mount construction, and in colors to suit any interior decor. Automatically calls guest room at any desired time between 6 and 10 AM. Other time ranges available upon order.

AMERICAN'S No. A-WA-1/- Automatic Wake-up Call is a tremendous time-saver for occupancies of any size. Model A-WA-1/50 here illustrated is for a 50-room hotel or motel.

Master Control Panel has for each guest room a designation strip, lamp, and 17 Time Jacks — one for each quarter-hour from 6 to 10 AM. When Telephone Operator receives guest's wake-up call time, she inserts a plug into the respective Time Jack. Operation now is fully automatic: Wake-up Call "remembers" calling time and sends an insistent signal to the room, at the proper calling time.

This calling signal is both visible and audible: (a) at 2-second intervals a light blinks at both the office control panel, and in guest room; and, (b) in one model a recording advises guests to "shut me off" and in another a buzzer sounds loudly. When guest pushes a button (at blink light on Room Unit), signal light goes out in guest room and on office panel, and audio signal stops.

GENERAL SPECIFICATIONS

No. A-WA-1/- System includes Master Control Panel with Time Clock for 4-hour timing (up to 6 hours can be supplied); complete set of Time-set Plugs; either an **AMERICAN No. A-TD** continuous-play Tape Deck and pre-recorded Tape (not sold separately) or a Buzz Generator; 2-second Timer; and, guest-room Room Unit. Long-life, low-current signal lamps are used. Fuse Holder, Off-On Power Switch, are front-mounted. Satin-black steel case is approx. 31 x 21 (plus 2″ mtg. skirt at top) x 4″ deep (50-room unit, illustrated); wgt. approx. 100 lbs. Operates on 115 V., 60 cy. A-C.

Net Price $20.00 per room, less room units; materials only. **Room Unit** (light, switch, wired and assembled on lettered metal plate, to mount on 2-gang outlet box), **Net Price $8.75 ea.** Cable not included.

*This system protected by pending patents.

SIGNAL MAIL RACK & MESSAGE-AT-DESK

AMERICAN COMMUNICATIONS manufactures two signal systems, either of which may be used to expedite message and/or mail handling in hotels, motels, schools, factories, hospitals, and other institutions.

The **Mail (and Message) Rack Signal System** is comprised of numbered pockets, one for each room (or other unit), and a lamp and switch for each pocket, Fig. A. Each pocket is wired to a guest-room. When clerk files mail (or messages) in pocket, he switches on a corresponding lamp; simultaneously, a duplicate lamp in the remote room lights, and remains lit until guest acknowledges the signal, Fig. B.

A new **2-Way model, No. A-MR2,** with access from either side and lamps and switches on both, enables Mail Clerk to insert mail from one side and silently signal guest, and for Telephone Operator to insert messages from the opposite side (and also signal the guest).

The **Message-at-Desk Signal System** is identical with the Mail Rack System, except that there are no pockets — only lamps and switches mounted on a control panel. Message clerk — usually the telephone operator — signals to guest that there is a message (or mail) by moving a switch as above described.

The Racks and Panels are available in a variety of constructions to suit individual requirements as to location and number of rooms, and in standard or special finishes as decor dictates. The Mail Rack is available with shelf at top of each pocket for room key, Fig. C.

If guest room is not wired for radio, a separate wall plate, Fig. B, is provided for the signal lamp; otherwise, it can be included on the radio control panel (See Room Unit on facing page).

Long-life lamps in Signal Mail Racks and Message-at-Desk units are easily replaced from front. A metal stop strip across the back of each row of pockets, in the standard or **No. A-MR3 Mail/Message Rack,** permits insertions only from front. Model shown in Fig. A is for 100 rooms, but units can be built to suit 1,000 or more.

They may be made for Flush-wall (recessed), Surface-wall or Desk (table-top) mounting. An easily removable end cover plate permits access to wiring. Power Supply unit (included) is controlled by a switch. House signal wiring carries only low, safe voltage.

AMERICAN'S No. A-22X/- Multi-conductor Cable is used for connection to distribution point, and A-19/1 or A-19/2 wire for runs to Room Units.

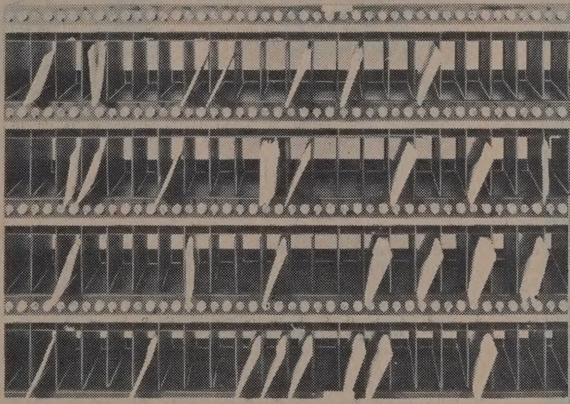


Fig. A. No. A-MR3/ 100 Mail/Message Rack, standard type, with stop strip and shelf at top of each pocket for room key. A designation strip below each row of lamps and switches identifies each room.

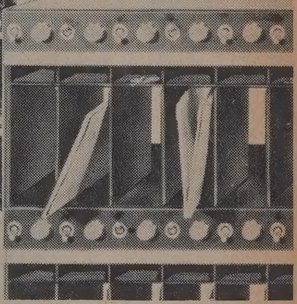

Fig. C. No. A-MR3 Mail/Message Rack has Key Shelf at top of pocket.

SPECIFICATIONS — Signal Mail/Message Racks

Standard finish, velvet black enamel. Material is steel. Standard pocket measurements: approx. 8″ deep x 7¾″ high (incl. 1⅛″ for Key Shelf, where used) x 2″ wide. Specify whether wiring termination board is to be placed at left or right end of Rack.

A-MR3/- Signal Mail Rack System, 1-way type, standard, ***$12.50.**

Above **Net Prices** are less connecting wire and Room Unit, but including Power Supply, for up to 100 rooms. Discounts apply, on larger installations.

SPECIFICATIONS — Message-at-Desk

Standard finish, Flush or Surface mounting type, velvet black or gray enamel; Desk-top type, gray enamel. Other colors to suit decor are special. Material is steel.

AUDIO/VISUAL/SIGNAL SYSTEMS & PARTS FOR HOTELS — MOTELS — INSTITUTIONS

MASTER RADIO OR TV ANTENNA SYSTEM (& CATV)

Installation requirements for an **AMERICAN COMMUNICATIONS Master Antenna System** whether for Radio or TV — or both — mainly depend upon field signal strength and local interference. A field-strength survey must be made to determine whether the received signals are sufficiently strong and reasonably "clean".

If TV signal strength in the area is low, a weatherproof **No. A-BA Broadband Booster Amplifier** (shown mounted on mast) located at the antenna may be used, for an additional 25 db gain on all VHF channels; power supply and Off-On control are a separate, remote unit, No. A-BAP (not shown), which may be up to 500 ft. distant. Input and Output, each 300 or 75 ohms. Terminals permit use as Broadband, High-band, or Low-band Amplifier.

The Radio signals are fed to the **Centralized Radio System**, and the TV signals are distributed to the various TV risers.

TV signals on UHF channels may be converted to unused non-adjacent VHF channels by means of a **No. A-U/V-C Converter** (not shown), its UHF Mixer head mounts at antenna, and delivers VHF signal to remote oscillator. Specify the UHF and VHF channels. Converters are also available to cover VHF High to VHF Low, **No. A-V/V-C.**

To deliver adequate signal strength at each TV outlet, it usually is necessary to use low noise, high gain, head-end amplifiers, one for each channel. A **No. A-CH/- TV Amplifier Strip** is shown here. A group of up to 7 such channel amplifiers can be assembled in one steel cabinet, **No. A-C/CH/-** (not shown here).

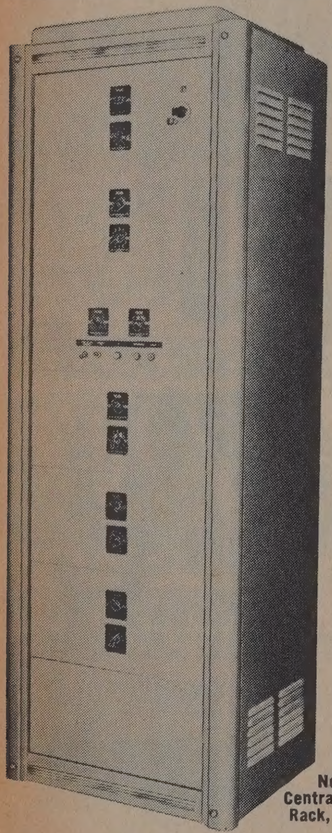
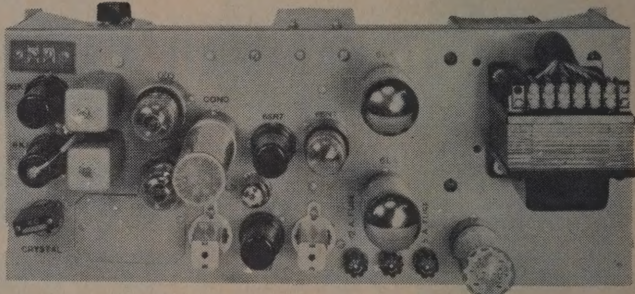
CENTRALIZED RADIO SYSTEM



No. A-CR Centralized Radio Rack, complete



No. A-300C Radio Receiver, crystal controlled.

The **control center** of **AMERICAN COMMUNICATIONS'** "Channelized" Radio System is the **No. A-CR Rack Unit** shown here. Signals from the Antenna System are fed to the Rack-and-Panel assembly, and then to remote speakers (guest rooms, public areas, etc.) through a system of properly selected cable and matching components as specified by the Supervising Engineer.

No. A-CR Rack can be modified to suit requirements. The standard Rack, however, is comprised of 4 **AMERICAN** No. A-300C AM Crystal-controlled Radio Receivers, 1 No. A-300T AM Tunable Radio Receiver, a panel-controlled No. A-P/M Preamplifier/Mixer (for mixing a high-impedance microphone and phonograph), Monitor Speaker, power supplies and controls, and Timer. The Radio Receivers deliver a minimum of 40 watts audio power. (Additional amplification, if needed, is incorporated in a second Rack.)

If the tunable receiver is a No. A-300F (for FM reception), the house manager may tune it, like the A-300A AM Radio Receiver, to a continuous-music station for background music, available to guest when he switches to this channel — within the operating hours automatically controlled by the Timer.

The Monitor Speaker (optional), hinged to Rack, has same response as room speakers for true check of programs as received in guest rooms. Switching permits its use on background music, P.A., etc.

If Rack is to be used with **AMERICAN'S** Emergency Alert System, the standard model will include 8 hermetically-sealed relays — one each for the 5 radio receivers, one in preamplifier/mixer, one in the automatic timer circuit, and one in a booster amplifier circuit. These enable remote Emergency Alert equipment to assume control and deliver to all the loudspeakers a suitably high signal whenever needed, regardless of off-on status of Rack, room speaker channel-selector switch, or P.A. system.

Rack can include additional facilities, as for example switching into Muzak or other wire line, or use of tape or record player, for background music. For **Stereo FM reception,** using a multiplexed FM station as the source of both stereo channels, a Stereo Multiplex Adaptor is added to the existing FM receiver, and the two resulting audio channels are fed to stereo equipment.

Receivers are high-fidelity type, with push-pull output. The No. A-300C Radio Receiver is shown here; No. A-300T, and -F, have same physical dimensions and general appearance. Several features make these receivers exceptionally reliable and efficient: (A) the single electrolytic capacitor is plug-in type for servicing convenience; (B) circuits are triple-fused (one each for power line, filament supply, high-voltage supply); and, (C) voltage regulator tubes limit surge potentials to safe values. For trouble-free performance over long periods of continuous operation in commercial service, only close-tolerance, high-quality components are used, and operated within wide safety margins, in a ruggedized receiver design.

SPECIFICATIONS

Radio Receivers

Tuning range, 540-1,720 kc.; sets have 1 RF and 2 IF stages. Output transformer has taps that present balanced load impedances to the following lines: 8, 16, 32, 250 (70 V.), and 500 ohms. Rated audio output, 40 W. Each Receiver has a Selector Switch, knob-controlled from front of panel, for selection of (1) Radio; (2) Microphone or Phonograph; and (3) Muzak, or other wire line.

Tube complement, No. A-300T: 1, 6SA7; 2, 6SK7; 2, OD3/VR150; 1, 6SR7; 1, 6SN7GTB; 1, 6AL5; 1, 5R4; 2, 6L6GC. No. A-300C has same complement, except 6K8 replaces 6SA7.

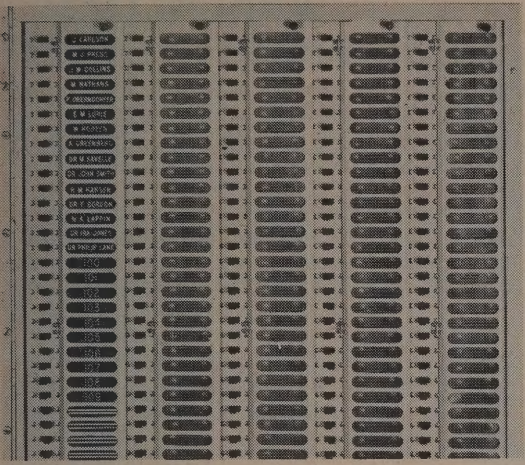
DOCTORS CALL BOARDS



No. A-DCB/- Doctors "IN" or Call Board. Also available w/Message Signal, Intercom, etc.

Shown here is AMERICAN'S Doctors Call Board, flush-mounting type. Sizes and mountings to order. May be used wherever rapid, convenient check-in and check-out are wanted.

A column of switches at left of a column of translucent designation strips permits doctors to indicate whether they are on duty. Upon arrival, each moves his respective switch to "On." This "IN" Board can be operated by a Receptionist, instead. As doctor may arrive at an Entrance door, and leave by an Exit door, a second or "OUT" Call Board must be provided at this Exit.

Call Boards less switches can be provided for Head Nurse and Superintendent's offices, to show the on-duty status of doctors.

Doctors Call Board is also available with Message-at-Desk facility — without requiring additional wall space! The lamps under a name strip slowly blink off and on until this message signal is acknowledged.

Another Call Board model provides Intercom facility. This allows physician to receive his message without delay; upon leaving, he can give special instructions to front desk (usually, remote from exit).

Still another model is double-sided, so illuminated name can be seen from Doctor's side of Call Board and Telephone Operator's side.

No. A-A/VP-E/3 3-bank Encoder, for Audio/Visual (silent) Paging System.

Designed for use with a Call Board, **AMERICAN'S** Audio/Visual Paging System presents an efficient means of personnel paging in hospitals, department stores, schools, hotels, factories, offices, etc.

In operation, a designated person (Telephone Operator, for instance, in a hospital) sets up on a desk-top Encoder, the call number assigned to a person (doctor or nurse) whose attention is wanted. This can be any number from 1 to 999 per bank of push-buttons. This number then instantly appears in the window of remote readout indicators or Decorders, wherever located. The called person can acknowledge the call in a variety of ways — house phone, Intercom, etc.

Encoder No. A-A/VP-E/3 shown here has two additional banks of buttons which permit two additional calls to be set up at the same time, and by automatic switching, each will be signaled, in sequence, 20 seconds after the preceding one. Or, by operating a switch, any one of the three sets of numbers can be held in view and shown steadily until acknowledged.

A jack on the front skirt, for microphone, permits audio paging, emergency instructions, etc. A pilot light indicates the "ON" condition. Encoders may be located in several offices, and Decorders at any number of remote points.

SPECIFICATIONS

Encoder No. A-A/VP-E/3, 3-bank, is a desk-top unit in metal housing. Dimen., approx. 11 x 5¾ x 14" deep. Operates on 115 V., 60 cy. A-C.

BUILDING ALERT SYSTEM

AMERICAN'S Emergency Alert System may be used with AMERICAN'S **Building Alert System** (particularly suited to apartment building complexes), in which a warble tone is fed to outdoor speakers to summon the patrolman on the beat, if any emergency arises.

PRE-SIGNAL FIRE ALARM SYSTEM

The Emergency Alert warble-tone signal is also part of AMERICAN'S **Pre-signal Fire Alarm System** designed to protect hospitals, schools, hotels, etc., against panic due to sounding of general evacuation bells by operation of heat detectors or manual break-glass stations. A Control Panel Assembly connects these detectors or manual stations to the warble-tone signal box, allowing an attendant in the occupancy to exercise judgment as to the urgency of the alert before sounding the general alarm.

APARTMENT "ANNUNCITEL"

AMERICAN'S new **No. A-AA/- "Anuncitel"** solves many problems of Apartment House owners and architects. It is a low-cost, combination multiple station 2-way telephone and transistorized annunciator, for intercommunication and signaling between apartments and lobby, service entrance, garage, etc.

WITH ANNUNCITEL —

1) House manager can tell which apartment called his office in his absence.
2) Tenants can be signaled from service entrance when a package arrives.
3) Service attendant can handle all apartment calls that arrive simultaneously, without neglecting any call.
4) Arriving visitors can have immediate contact with tenants.
5) Tenants can reach doorman or superintendent immediately, in an emergency.
6) Attendant can contact garage or other in-building locations, or automatically leave signal to be called.

The Master Station or lobby unit has hanger-type telephone handset, and 25-name apartment designation strip. Apartment Station is a wall-mount panel that fits a 3-gang outlet box. Both available in stainless steel or color-anodized aluminum.

The annunciator, a transistorized design employing new solid-state techniques, can be built into either unit, or both, to show which station is calling and which is being called. The transistorized design virtually eliminates service problems.

Net Price, Master and 25 Apartment Stations, **$30.00 per apartment.**

ANNOUNCING—Newest* TV-set THEFT ALARM

AMERICAN'S new TV-set Theft Alarm actually has a number of uses:

1) In Hotels, Motels, to signal any attempt to steal a television set.
2) In Apartment Houses, to signal doorman if any attempt is made to illegally enter an apartment.
3) In Apartment Houses, to alert superintendent or doorman, in an emergency, without sounding a general alarm.
4) In Stores, Factories, to signal any attempt to steal valuable electric appliances, tools or equipment.

It is manufactured in two standard models; both operate to signal the instant any attempt is made to steal the TV-set (for example) to which it is connected, but only Model B is used in apartment houses.

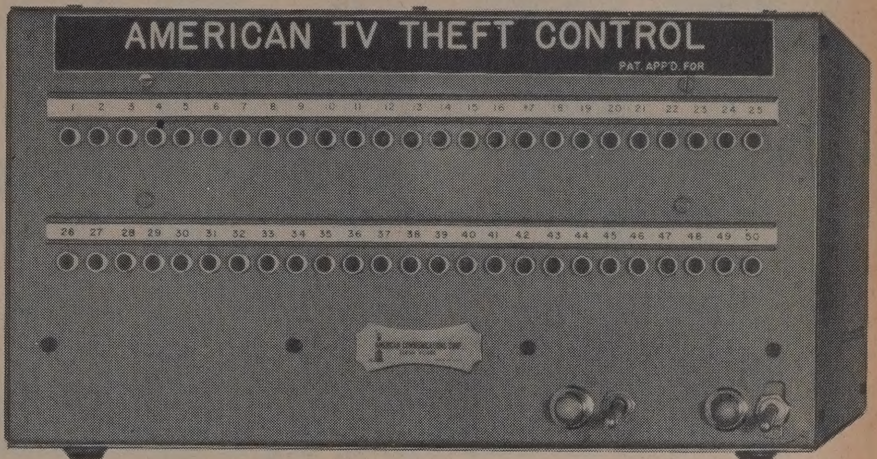
Model A (**No. A-TA/A-**) may signal (a) only at actual location of attempted theft; (b) at Front Office; or, (c) both. **Model B** (**No. A-TA/B/-**), shown right, signals only at front desk (lobby, superintendent's office, etc.). Model B meets most requirements, combines all alarm elements in one small unit, and therefore is the least expensive and most popular design.

Operation: Equipment (TV-set, appliance, etc.) connects to wall outlet by means of a Conversion Cord. Any attempt by unauthorized persons to remove connection from wall outlet, cut power cord, or (Model A only) remove master antenna connection, starts an alarm signal.

Model A is a self-contained wall unit which sounds an alarm—loud raucous buzz—in the guest room until staff personnel unlocks and resets it; or, it may sound a buzzer and flash a light at the Front Office. This flashing light can be an existing signal system, such as **AMERICAN'S** Message-at-Desk.

Model B combines all the alarm elements in a single desk-mount assembly — no signal in guest room alerts the thief. A Reset switch cancels alarm buzz and flashing light, but a room indicator lamp remains lit until staff personnel has visited room and restored the circuit to its normal alert condition.

REQUIRES ONLY ONE CONTROL WIRE PER GUEST ROOM



Apartment House owners now can offer their tenants maximum security at negligible cost. Tenant is protected against an unlawful entry going undetected; can signal for help in an emergency.

SPECIFICATIONS

No. A-TA/A/- One required per TV-set. Contains loud-sounding buzzer. Mounts on power outlet box in guest room. TV Conversion Cord plugs into its polarized receptacle; other end connects inside TV-set. Gray enameled steel box, 6¼" x 8⅜" x 2¾" deep, has key lock. BI-611 and BI-606 Multi-master, Multi-remote System

For a completely flexible system of remote and master stations, we suggest the Betacom BI-611 and BI-606 Master Stations combined with the BI-602S and BI-602 Remote Stations and the related accessories. These eleven station and six station masters operate from a central AC power supply and are wired through a central distribution box for convenient wiring. Power supply and systems are U.L. approved. Each Master has a privacy switch which is on for normal operation so you may be called but not monitored. This switch can be placed in the "hands off position" for answering without being near your Betacom. When in this position an annunciator light indicates when someone has selected your station. Volume controls on all stations control your incoming volume, a special automatic volume compression circuit sets the level regardless of the loudness of the calling message. BI-611 uses a standard 15 conductor cable. BI-606 uses a standard 8 conductor cable. BI-602S remote units may initiate calls to 5 different Masters selectively or can answer any Master. BI-602S uses standard 8 conductor cable. BI-602 can initiate a call to or answer any master to which it is connected. BI-602 uses standard 4 conductor cable. BI-500 30-Watt distribution amplifier, with BI-501 high power remote, BI-502 high power remote with speaker horn, and/or BI-7UH outside/high noise area speaker horn may replace any of the remote stations in the system.

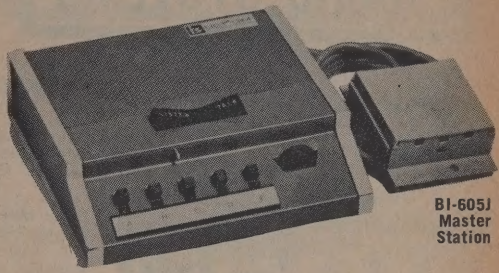
BETACOM INTERCOM SYSTEMS

BETA INSTRUMENTS CORP./DIVISION OF CADRE INDUSTRIES ENDICOTT, N. Y.

BI-605J System — Intermix System of Masters and Remotes

This versatile system provides communication between Masters and Remotes intermixed. Up to 6 Master Stations can communicate selectively with each other. Remotes can reply at a distance but do not originate calls. Masters can operate "hands-off" with lock tab. Each Master is factory wired to a junction box for easy wiring. A central distribution box is provided to minimize wire use and facilitate installation. All cross connections are made in this distribution box. Masters operate either on standard 9-volt transistor or AC house current (with BI-105 Power Pak). Up to three separate conversations can be carried on between masters simultaneously. High quality feedback circuit design provides low current consumption, eliminates heat and gives economical operation. Masters communicate with other masters by "high level" output to minimize noise pick up and allow uninterrupted private conversations.



BI-605J Master Station

BI-605 System — One Master Station and Five Remotes

This system provides communications between one Master and up to 5 remotes. Master is powered by two standard 9-volt transistor radio batteries or BI-105 AC Power Pak. Remotes may initiate calls to Master at all times, even when Master is in "off" position. Remotes cannot communicate with each other. Up to 5 remotes may be called selectively by Master. Fully transistorized. Four wire leads, 4WF50, connect each remote to Master. Any standard 4 lead wire can be used in installation.

"MO" SERIES BOOSTER AMPLIFIERS

Bogen's new "MO" series booster amplifiers embody the most advanced design and construction techniques. Ideal for use wherever undistorted high power is required. Exceptionally wide-range frequency response characteristics. Input signal of 2 volts or less will drive any of the boosters to rated output. Built-in provision for balanced low impedance line input and for paralleling several "MO" series power amplifiers to multiply power output. The MXM and RP-2 are ideal preamplifiers for these boosters.

NEWCOMB SUPER COLUMN, MODEL SCS-412

Here's the best column speaker you've ever heard. The Newcomb SCS-412 gives you super intelligibility, super efficiency, super power handling capacity. It contains four *twelve-inch* speakers specially developed for column use. Its peak power handling capacity of 120 watts makes for dependability and unusually low distortion when used with conventionally-powered systems. Each amplifier watt is converted into more sound than is available from any other column. The SCS-412 makes small amplifiers sound like big ones. It will project your voice clear as crystal, syllable-perfect over the noisiest big crowd. It takes a man-size system to produce these results. The SCS-412 stands 56″ high, is 15″ wide, 7½″ deep, weighs 42½ pounds. Impedance is 8 ohms. It has a 25 foot cord, "Hideaway" cord compartment, series type jack with shorting switch. **PROFESSIONAL NET: $139.50**

STEREOPHONIC
MONOPHONIC

Built with a great reserve of power for most uses — 40 watts peak per channel — the Newcomb TRS-1680 is perhaps the most complete and flexible portable sound system ever built. It reproduces stereo or mono with the turn of a knob. Stereo or mono tape or radio can be fed to the system. Live music and speech are reproduced either stereo- or monophonically.

TRS-1680 SERIES 80 WATT

It has three mike channels. The central mike puts the speaker or square dance caller in the middle, midway between the reproducers. There are separate treble, bass, and volume controls for phono or other reproduced sound. Each mike channel has its own, individual tone and volume controls. Mike tone controls are rotated for treble adjustment, pushed or pulled for bass. There is a blend control to provide any degree of stereo you wish. There are "Left" and "Right" inputs for radio, tape, or auxiliary; a scratch filter; "All" or "Phono" monitor jacks; jacks for two or four speakers with an impedance-matching switch. Turntable-amplifier unit DIMENSIONS: 9¼" x 17⅞" x 18⅝"; 43 lbs. POWER CONSUMPTION: 180 watts, 117 volts, 60 cycles a.c. A wide choice of reproducers to meet specific assignments is offered...

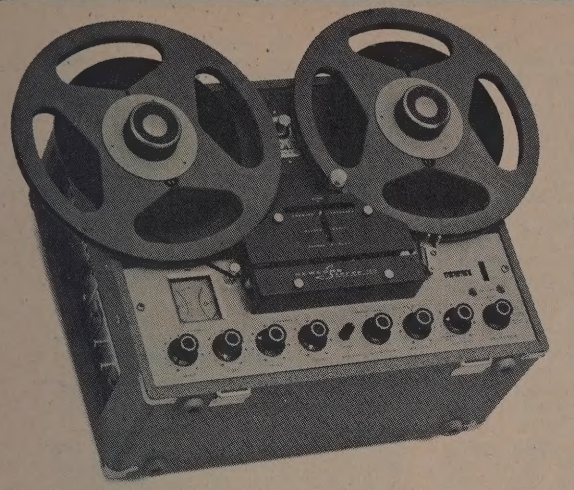
TAPE RECORDERS



NEW TX-10 SERIES

CYBERNETICALLY ENGINEERED FOR INTUITIVE OPERATION ▪ SOUND ON SOUND RECORDING ▪ THREE HEADS ▪ HYSTERESIS MOTOR ▪ MONITOR BEFORE OR AFTER RECORDING ▪ ANY SIZE REELS—3″ TO 10½″ ▪ MIXING CONTROLS ▪ POINTER-TO-POINTER METERS ▪ DIFFERENTIAL BRAKING

Essentially a machine for the perfectionist, the Newcomb TX-10 incorporates virtually all of the features professional users have said they would like to see in a portable recorder. The TX-10 is thoroughly dependable, a high precision instrument, with a transport mechanism that is probably the most foolproof, the gentlest on tape of any machine in the world. Tape movement is controlled with a telescoping joy stick. Operation is intuitive. The natural thing to do is the right thing to do. You can record sound on sound ad infinitum. For example, you first record on track one. Twist the selector and you record on track two while the signal from track one is being transferred to track two. Twist the switch again and you are adding new material to track one while the previously combined signal from track two is being re-recorded on track one. There is no limit to the number of times this can be done. Tape loads in a straight line. No pressure pads on heads. All tape guides are stainless steel. Shuts off automatically at reel's end. Head covers remove for easy cleaning and editing. A pause-edit position of the joystick permits inching tape to exact location desired. The TX-10 is a two-speed machine—7½ ips and 3¾ ips—selected by push button with automatic speed-frequency correction. (15/7½ ips machines available on special order.) A relatively powerful, cool-running hysteresis synchronous motor and dynamically-balanced flywheel drive keep flutter and wow below .2% at 7½, .25% at 3¾, or .1% at 15 ips. The TX-10 has three heads—record, playback, and erase. 100KC bias and erase oscillators with indicators. Response is ±2 db 30-18,000 cps at 7½ ips, or ±3 db 30-13,000 cps at 3¾ ips. The TX-10 may be operated either vertically or horizontally. The dual volume indicating meters are illuminated, arranged pointer-to-pointer, show playback as well as recording levels. Too prevent accidental erasure, you must push a separate interlock button to record. The four-digit counter permits close measurements even with a 10½″ reel fully loaded with thin-base tape. There are separate "mike" and "line" input mixing controls for each channel, a balance control, a ganged volume control, a pilot light. A roomy opening on the left-hand side of the case provides for all inputs and power cord stowage. There are sockets for Cannon XLR-3-12C male connectors, easily accessible sockets for Newcomb plug-in input transformers to permit use of low impedance microphones. Outputs are on the right side of the case.

Dimensions: 12⅞″x16¾″x9½″. Weight: 36½ lbs. Power requirements: 95 watts, 117 volts, 60 cycles a.c.

PROFESSIONAL USERS NET: $750.00.

Controls are ganged. They consist of a bass boost and attenuation control, treble boost and attenuation, volume control, and a balance control. There is an input jack for each channel, a stereo-monaural selector switch, output impedance selectors, and two speaker sockets for each channel. The removable cover carries tape reels of all sizes up to and including 10½″. A plastic zippered bag for miscellaneous cords is included. Frequency response—20-20,000 cycles ±1 db. Distortion per channel at 20 watts r.m.s.—less than 1%. Hum below —65 db. Output impedances per channel—16, 8, 4 ohms. 8½″x16¾″x16⅜″; 32 pounds. **PROFESSIONAL USERS NET: $199.50.**

• Selective Paging with Reply • Push-Button Channel Selector
• Start a System with any number of Masters and Staffs

Provides selective communication. Each Master is equipped with a 6 or 12-channel selector; can converse with any other station selectively; can receive calls on any channel Master elects to use. As many as 6 separate conversations may be held simultaneously, with 12 Masters. Masters can talk with any station in system; can also set up conferences.

ATLAS SOUND

ATLAS PAGING AND TALK BACK SPEAKERS

All speakers approved by Federal Civil Defense Administration.

The HU and CJ models listed below are all equipped with the well-known "Versalock" mounting bracket. This rigid, rugged and dependable bracket is completely adjustable on both a horizontal and vertical plane, affording "pin-point" directivity and simple secure mounting. The HU and TP horns are constructed of aluminum, while the CJ horns are molded of indestructible Fiberglas. Rugged diecastings and tough steel parts add strength wherever necessary. All models are 100% weatherproof under all climatic conditions.

HU-12N Small in size and low in cost. Excellent for low power paging and talk-back systems where limited coverage is required.

HU-15N The famous ATLAS SOUND "work horse," HU-15N is the most popular all-purpose, trouble-free speaker of its type and size.

HU-24N Similar to HU-15N. The larger horn improves low frequency response and increases over-all efficiency. For paging and talk-back systems that are also required to reproduce music.

CJ-14N A wide angle speaker with a rectangular horn opening which gives broad sound dispersion in the horizontal plane while maintaining good vertical coverage.

EC-10 The lowest priced American-made speaker designed specially for low power systems requiring limited coverage. Made possible by a breakthrough in design, materials and performance, EC-10 gives improved results and high efficiency for intercom and other applications formerly using cone speakers.

Horn sections are molded of a new, tough, all-weather, acrylic plastic and the handsome beige-brown color combination blends with any decor. The tough steel bracket is adjustable and makes mounting simple and secure. Model EC-10 is unmatched where size, weight, appearance and high efficiency combined with low cost are factors.

CJ-30N Similar to CJ-14N, except the power handling capacity is increased and the larger, wide angle horn improves low frequency response.

TP-15N One high efficiency driver unit does the work of two for low cost bi-directional coverage in long corridors and outdoors. The universal bracket mounts the dual horns at a 10° angle down or out from wall surface or pole.

ATLAS DR PROJECTORS

NON-RESONANT—STURDY—WEATHERPROOF

Atlas DR projectors are the result of many years of acoustic research. This costly engineering and elaborate tooling has resulted in projectors that are without acoustical or mechanical equal. All acoustical sound paths are clean and uniform without steps or pockets to disturb the normal function of the horn. These critical design features eliminate conditions of turbulence, frequency cancellation and resultant signal distortion. All models are equipped with a heavy duty "U" bracket. This bracket is securely fastened to a main body casting which will not fail when subjected to extreme conditions of stress, strain and vibration.

ATLAS MICROPHONE DESK STANDS AND ACCESSORIES

NO SLIPPING—NO RATTLE—NO NOISE—NO SCRATCHING—NO WEAR

The "Full Grip" clutch is standard on all models—it offers an extended length clutch body, permitting a secure, full hand grip. The clutch mechanism of all "Velvet Action" stands is inner-lined with a wear-proof bakelite locking collet which grips without jamming, slipping or sudden dropping. All chrome plated surfaces are carefully polished prior to plating to assure a uniform "Super-Chrome" wear resistant, lifetime finish. All threads on tube assemblies are individually inspected to assure a perfect fit when assembled to the base castings. All bases are functionally designed to offer maximum stability for a given base weight. The maximum base mass is located at the outer periphery of the casting where the concentrated weight is most effective. All bases include self leveling, shock absorbing base pads, plus three additional "anti-tip" points located between the base pads. All models terminate with a 5/8"-27 thread at the microphone end.

MS-10C Economy model suitable for most applications where a low cost stand is required. Offers adequate base stability for average weight microphone.

MS-12C Similar to above but increased base weight offers an added advantage. Flat design of base is modern in appearance and is finished in a dark gun metal shrivel finish. Equipped with base pads to absorb shock.

MS-11C Full chrome design. Entire stand base and upright tube assembly completely finished in "Super-Chrome." Excellent for use where fine appearance is a requirement. An excellent choice for use with full chrome plated microphones. Equipped with base pads.

MS-4 Three section telescoping microphone stand permitting a wide variation of adjustment. Can be adjusted from 26 inches to 61 inches in height. Excellent for use in schools, etc. where it is necessary to adjust the stand over a wide range of height adjustment. Minimum collapsed length offers convenience in transportation.

MS-20 DeLuxe model. Maximum stability suitable for use with heavy, expensive microphones. Large oversize tube assembly, 7/8" diameter telescoping tube, 1 1/8" diameter base tube, base diameter 12 inches. Oversize clutch assembly assures secure locking adjustment. Top adaptor included for 5/8"-27 microphones.

MS-25 Professional Microphone Stand. The ultimate in microphone stands. Features the "Safety Air Lock Cushion." This sensational feature prevents any accidental or sudden slippage of the telescoping section. If the clutch mechanism is accidently released the stand cannot suddenly crash down—thus prevents damage to the microphone from severe mechanical shock. The telescoping section is at all times "cushioned on air" and the controlled escapement of air will only permit a slow smooth and quiet collapse of the stand. Base finished in a combination of chrome and shrivel. Heavy duty tube assembly, 1 1/8" and 7/8" combination—5/8"-27 top adaptor.

MS-11S - MS-12S Automatic "Sleeve Action" models. A fully automatic means of adjusting the height of the stand. A slight downward pressure on the "Sleeve Action" control permits the telescoping section to be lowered—cannot change its position without a deliberate pressure on the actuating sleeve control. Two models full chrome base or shrivel finish.

CS-1 Fully collapsible, portable stand quick and simple to set up. Collapsible to a minimum overall length of 23 inches.

CS-52 A unique three-legged floor stand which combines handsome design with maximum stability. The cast iron base, with base pads on each leg, is finished in dark gun-metal shrivel. Standard full chrome upright tube assembly. Two piece base disassembles easily for compact handling.
Packed: One complete stand packed in a single carton, suitable for reshipment.

CS-42 Similar to CS-52 in design, except that base is readily collapsible for portable use or convenient storage.
Packed: One complete stand packed in a single carton, suitable for reshipment.

This new and revolutionary design in microphone stands is ideal for fixed as well as portable applications. Excellent for use when it is desired to contain the stand within the amplifier or speaker carrying case. The stability of the assembled stand is equal to many types employing heavy cast iron base construction. The base legs are easily removed to permit minimum size, lightweight transportation. The spring lock leg-holding mechanism of this ingenious design offers a quick and simple "Come Apart" feature. No tools or screw fastenings are required to hold the base assembly together. No small parts to become lost. GENERAL PURPOSE MICROPHONES

Unidirectional Line Microphone

MODEL 644 SOUND SPOT® — Another Electro-Voice revolutionary development, the Sound Spot Model 644 is a combination cardioid and distributed front opening instrument, making it the most directional P.A. microphone ever. The Model 644 has the farthest front pickup, or better than 2.5 times the working distance of pressure types. Work close or far away without change of frequency response.

Cancellation from the rear and sides exceeds 20 db above 700 cps giving practically complete rejection of unwanted sound. Cardioid below 700 cps. This feature gives extremely high rejection of random noise. Reverberation and feedback are vastly lower than with any other P.A. microphone, allowing much greater leeway in loudspeaker placement.

The effective front acceptance angle is 45° each side of center, providing best isolation of individual performers. The Model 644 is 9 db better on the reduction of wind noise and has far less response to shock than most other microphones.

Frequency response is smooth from 40 to 10,000 cps. Acoustalloy® diaphram. High output: —53 db. Dual high and low impedance selected by changing one tap on MC4M cable connector. The case is high-pressure die-cast zinc with ¾″ aluminum tube; satin chrome finish. Rear diameter 2$\frac{5}{16}$″, length 16″. Cable is 18′. Weight, 2 lbs. 9 oz. Net Each...**$66.00**

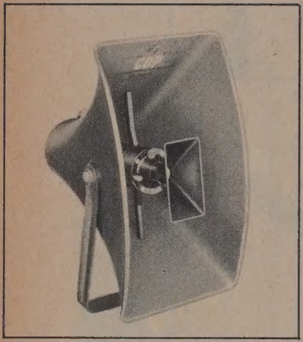
PUBLIC ADDRESS HORNS AND DRIVERS

Compound Diffraction Projector



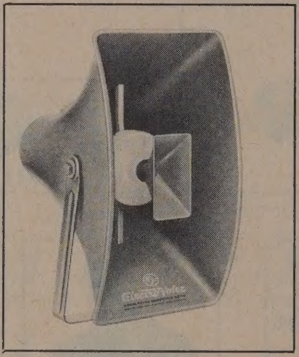
848

MODEL 848—Combines FC100 Compound Diffraction Horn plus DC30 Compound Driver for finest wide-angle sound, lowest distortion, highest quality of any projector. Specifications: Frequency response, 150-10,000 cps; impedance, 16 ohms; dispersion, 90° x 120°; power handling capacity, 30 watts; sound pressure level, 117 db; dimensions, 10½" x 20½" x 20". Net Weight, 13½ lbs.; Shpg. Wt. 17 lbs. Complete. Net Each...**$49.50**

Projector Horns

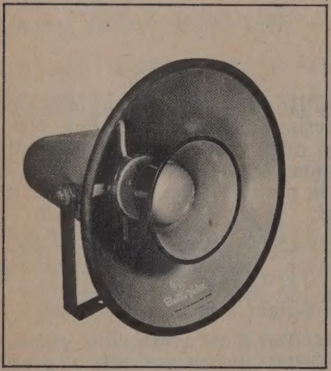
Completely new designs assure finest performance with Electro-Voice projector horns. Two basic types from which to choose . . . compound and reentrant.

EXCLUSIVE COMPOUND HORNS permit widest range at lowest distortion, plus complete directional control of both highs and lows. Best wide-angle coverage with exclusive diffraction horns means better sound through entire coverage area. Concentrating compound horn provides highest efficiency at lowest distortion. Natural voice and music reproduction result in higher intelligibility without annoying peaks.



FC100

MODEL FC100—Similar to the famous CDP®, the FC100 provides two diffraction horns for uniform wide-angle coverage. Frequency response is not compromised since both horns are ideally designed to handle a specific portion of the range. Compound horn reduces distortion far below any other projector design. Flexible coverage control provided by individual adjustment of each horn. Large horn is fiberglass with Mesa Tan finish molded in. Use any E-V convertible driver. Specifications: Low-frequency horn — cut-off, 100 cps; taper, 100 cps; air column length, 58"; sound distribution, 90° x 120°. High frequency sound distribution, 90° x 120°; crossover, 1,000 cps. Mouth size 10½" x 20½", depth (less driver), 20". Net Wt. (less driver), 10¾ lbs. Shpg. Wt., 12¼ lbs. Net Each...**$30.00**



AC100

MODEL AC100—Concentrating version of CDP®. Has all of the quality advantages of FC100, except utilizes round horns for most concentrated coverage with greatest efficiency. Retains compound design for lowest distortion—widest range. Use any E-V convertible driver. Specifications: Low-frequency horn—cut-off, 100 cps; taper, 100 cps; air column length, 58"; sound distribution, 80°. High-frequency sound distribution, 30°; crossover, 1,000 cps. Diameter, 21"; depth (less driver), 21"; Net Wt. (less driver), 11 lbs. 6 oz. Shpg. Wt., 13½ lbs. Net Each..**$33.00**

NEW REENTRANT HORNS provide wider range than ever before at lowest cost. Unique E-V ring reflector design provides better balanced highs than possible with conventional exponential designs, by reducing high frequency losses often encountered in reentrant horns. Smoother response plus added useful range increases intelligibility and adds to more natural sound. Rugged aluminum die-cast mounting plate plus precision die-cast reentrant tubes assure long-lasting performance. Heavy spun aluminum round bell or fiberglass rectangular horn provides either concentrated coverage or medium angle coverage. Electro-Voice Reentrant Horns accept any standard driver with 1⅜"-18 threads.

E-V Public Address loudspeakers are eligible for FCDA purchases.

MODEL FR150—Reentrant Horn. Medium-angle low-cost rectangular horn provides good coverage at low cost. Virtually indestructible fiberglass horn has Mesa Tan color molded in. Adjustable mounting angle allows best coverage. Can be stacked for multiple speaker applications. Ideal for car-top installation or wherever low silhouette is needed, and where bass response cannot be sacrificed. Accepts Electro-Voice convertible drivers or any standard driver with 1⅜″-18 thread. Specifications: Low-frequency cut-off, 150 cps; taper, 150 cps; air column length, 45″; sound distribution, 70° x 100°; mouth size, 10½″ x 20½″; depth (less driver), 21″; Net Wt. (less driver), 9½ lbs. Shpg. Wt., 12 lbs. Net Each. . . **$23.40**

MODEL AR150—Reentrant Horn. Round concentrating horn for maximum penetration at lowest cost. E-V ring reflector plus precision new exponential design contributes to widest range yet achieved from this horn type. Smoother curve results in high intelligibility, and remarkably natural voice and music quality. Rubber edge-damping ring eliminates resonances. High-efficiency design allows more useful volume from driver over entire range. Accepts Electro-Voice Convertible drivers or any standard driver with 1⅜″-18 thread. Specifications: Low-frequency horn—cut-off, 150 cps; taper, 150 cps; air column length, 41″; sound distribution, 85°; diameter, 21″; depth (less driver), 17″. Net Weight (less driver), 6½ lbs. Shipping Weight, 8 lbs. Net Each . . **$23.40**

Versatile Convertible Drivers

Now, for the first time, here are drivers that can be used interchangeably in compound or reentrant horns. Used on either type of horn, the new Electro-Voice Convertible Drivers feature highest efficiency available. Increased power handling plus extra increased efficiency make the 40- and 50-watt drivers uniquely useful where high power at minimum cost is essential. The high efficiency of all E-V Convertible Drivers is achieved without resorting to "peaked" response which may increase loudness, but does reduce intelligibility. The smooth response of these drivers insures most natural reproduction of voice and music for more satisfying quality with vastly reduced feedback problems and greatly increased tonal range. Double flux ceramic magnets provide long-lasting high efficiency in entirely new low-loss magnetic circuits. Edgewise-wound ribbon voice coils give 18% more efficiency.

The drivers are rugged and weatherproof; conversion to either reentrant or compound use can be made instantly in the field. Voice coils are also field replaceable, thus reducing repair costs to a minimum. E-V Convertible Drivers are available with 16 or 45-ohm voice coils or with built-in 70.7-volt line constant voltage transformers. This entirely new design concept gives better performance at minimum cost, making E-V Drivers your best buy.

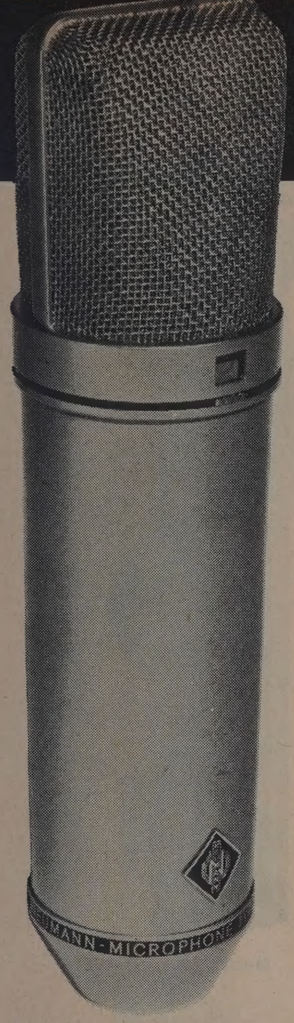
NEUMANN MICROPHONES



NEW! U-67 CONDENSER STUDIO MICROPHONE

CULMINATION OF OVER 30 YEARS OF ELECTRONIC LEADERSHIP!

Contains the following advanced features:

1. Electronically switched directional characteristics: Cardioid, Omni-directional, Figure-8.
2. Frequency response with virtually no peak at the high end.
3. Separate "Voice-Music" switch raises the roll-off starting point from 40 cps to 100 cps.
4. Sensitivity switch on microphone prevents overload of amplifier from close placement to sound source.
5. "Calibrating input" permits direct testing of microphone preamplifier with oscillator.
6. Uses regular EF-86 tube, readily replaceable.

Complete system includes: Microphone, Power supply, Interconnect cable and stand mount.

NEUMANN M-49b CONTINUOUSLY ELECTRONICALLY VARIABLE DIRECTIONAL PATTERN MICROPHONE SYSTEM

This microphone permits remote control of the directional characteristic. A smooth, continuous fader-control selects any of the basic directional patterns (non-directional, bi-directional, and cardioid) and any intermediate pattern. Wide frequency response with extremely low distortion—0.6% 40-15 kc up to 110 db absolute.

Complete microphone system consists of microphone, power supply and MZ-49 Swivel mounting harness.

NEUMANN KM-54a/KM-53a

The KM-54a is a super cardioid miniature microphone that has been designed with tv and film in mind. This ⅞" diameter by 5" long, 3½ ounce marvel, when mounted in the Z-38 full elastic suspension, can be aimed at the sound and provide more than 25db rejection of extraneous sounds in the studio.

Complete microphone system consists of microphone, power supply, inter-connect cable, output connector.

NEUMANN KM-56 MINIATURE CONDENSER MICROPHONE SYSTEM

The KM-56 satisfies a great demand for a microphone of modern, miniature styling of unexcelled reliability and performance. It is a true self-contained condenser microphone incorporating electronic switching of the directional characteristic (U.S. Pat. No. 2,678,967) to all three patterns: omni-directional, bi-directional, and cardioid. It uses a pure nickel double diaphragm capsule offering high resistance to temperature and humidity effects.

Complete microphone system consists of microphone, power supply, inter-connect cable, output connector.

NEW CALSTAR* COLUMN SPEAKERS

CALSTAR Controlled-Angle Lobe-Suppressed Twin-Array Reproducers are the result of an exhaustive study of directional sound radiation by Jensen engineers. In a CALSTAR column, an array of small woofers, covering the lower frequency range, is combined with a shorter array of tweeters covering the high frequency range (where the polar sharpening would otherwise become severe). Next, the signal distribution to each element is "tailored" so that the effective array length decreases as the frequency increases. The final result is a column design in which the vertical coverage angle is unusually constant for all frequencies and therefore exceptionally uniform sound quality and high speech intelligibility are achieved throughout the audience area. The exact signal distribution at each frequency provided by the pattern shaping networks has also been chosen to suppress unwanted side lobes.

with Compression-Driver Horn-Tweeter.

Here at long last is a genuine coaxial loudspeaker in 8-inch size with compression-driver horn-tweeter. Tweeter horn passes through the woofer core terminating in a circular horn inside and concentric with the woofer diaphragm. This design thus yields a circular (symmetrical) radiation pattern at all frequencies ideal for higher-power high-ceiling distributed sound. Excellent speech intelligibility with high quality reproduction for industrial areas, heavy-duty portable, and central speaker system use.

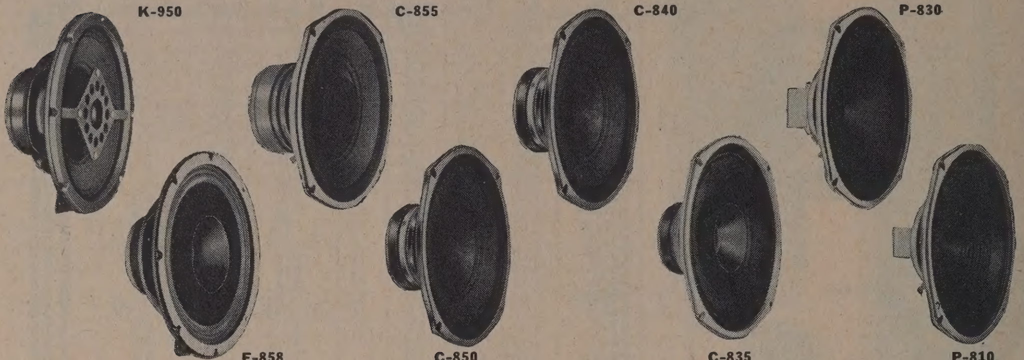
Jensen Professional Series Speakers

8" SPEAKERS FOR DISTRIBUTED SOUND

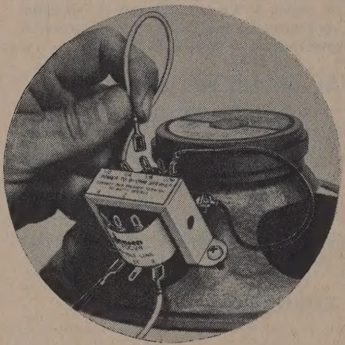
VALUE ENGINEERED FOR LOWEST INSTALLED COST



This new line of Jensen 8-inch Professional Series loudspeakers is specially designed to meet the exacting rigorous demands of commercial sound service. The 8-inch size is ideal for the majority of all distributed sound systems giving more than adequate low frequency range with a minimum of enclosure and mounting complications.

A **complete line** of speakers **value engineered** for lowest **installed cost** with such features as the handy 10-pack, preattached transformers, exclusive solderless connectors, weather and corrosion resistant designs . . . and many more. A wide selection of models to meet every need—from the lowest cost highly competitive application to the most sophisticated, highest quality system.

Four conventional type speakers with varying sensitivity and power rating (magnetic energy) with the typical 90° coverage angle. Two models have dual cone radiating system with 95° coverage angle and unusual high frequency range. Another basic model is an 8" coaxial with 110° coverage angle and unusual frequency range and smoothness for the finest quality and intelligibility. This 110° coverage angle provides approximately **twice** the coverage area, so **fewer** are required for a given installation. Still another model is the unique Jensen FLEXAIR* with dual-cone radiator; super-low resonance for those small acoustic enclosures and back boxes; big-speaker lows the remarkable h-f range to match.



PREATTACHED TRANSFORMERS

The eight basic models mentioned above are all available with preattached 25-volt or 70.7-volt "constant voltage" transformers, Models 25CV4 or 70CV4. Factory attachment insures lower cost to the end user.

AVAILABLE IN HANDY 10-PACK

All of these speakers are available at added savings and convenience bulk-packed ten per carton (with or without transformers). These handy 10-pack cartons have individual sleeves for each speaker thus giving speaker protection of odd lots until actual installation.

KWIKON* INSTANT CONNECTORS

Simply twist bare ends of two 12" input leads supplied for each speaker to incoming signal cable leads, insulate with wire-nut or tape. Slide sleeve clips onto input terminal lugs of speaker or preattached transformer as speaker assembly is raised into place. KWIKON* instant connectors also provide simple fast power tap readjustment on transformer.

JENSEN HYPEX* PROJECTOR HORNS

These projector horns are acoustically coordinated in design for best performance with Hypex* Driver Units D-30, D-40 and DD-100A, any one of which may be used on any the of horns. The horn expansion formula is the hyperbolic exponential (U. S. Patent 2,338,262) providing low frequency reproduction superior to that obtained with conventional horns of the same mouth size. Horns (with the exception of RT-20) are spun aluminum with weather-resistant baked tan enamel finish. Horns are threaded 1⅜″-18 and may be used with any driver units with this thread. Sturdy steel mounting "U" brackets allow horn to point in any desired direction; horn locks in desired position by means of new positive action trunnion clutches.

(See separate description and specifications on RT-20 Rectangular Horn).

HYPEX* LIFETIME DRIVER UNITS

Jensen Hypex Lifetime Driver Units have many features which contribute to increased performance and reliability. As a result **Lifetime Guarantee** is extended against failure under normal conditions of use!

All driver units are threaded 1⅜″-18 and may be used with all Hypex Projector Horns. They also make ideal replacements for other driver units, improving efficiency and power rating.

Specially shaped reinforced plastic diaphragms. Voice Coils are varnish wound and baked, resulting in a rigid assembly that is indestructible in normal use. Models D-40 and DD-100A have precision self-centering moving system assemblies. External leads connect to heavy binder screw terminals; strain reliefs on all units.

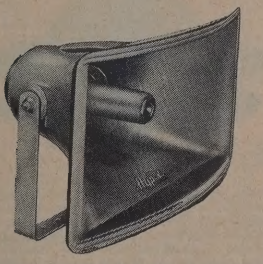
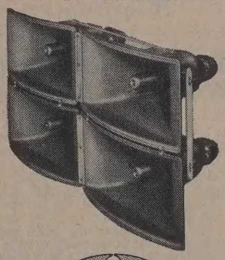
MODEL RT-20 RECTANGULAR HORN



These versatile horns may be used in a variety of ways to provide projector systems of almost any desired directional characteristics and total power rating. They may be used singly just as round horns are used and in such cases, the rectangular shape is frequently an advantage in appearance, minimizing obstruction to vision, and facilitating mounting.

RT-20 Horns are designed so that they may be stacked in plane or circular arrays. Eight units, each with a geometric sector angle of 45 degrees, form a complete circle with a diameter of 5′ 9½″, giving 360° horizontal coverage. Fewer units are used where less than 360° coverage is required as indicated below:

Number of Units	Horizontal Coverage Angle
1	80°
2	125°
3	170°
4	215°
5	260°
6	305°
8	360°



Horns may be "double decked," which will concentrate the sound in a narrower angle in the vertical plane. A stack two units high will give a vertical coverage angle of approximately 30 degrees; at the same time, there is a gain in sound pressure on the axis of 2.5 db, due to the restricted angle of radiation.

The horn is molded of high impact strength glass fibre reinforced polyester. Natural molded finish in Modern Tan color.

BV-1 BLAST VALVE

The BV-1 Blast Valve is an accessory device for protecting the driver unit from high pressures due to explosive forces. Valve is the same as used in Jensen military blastproof loudspeakers. Under the positive blast pressure phase, the valve moves inward to seal off the driver unit from the horn throat. On the negative phase the valve moves outward, again effecting a seal. With the valve in neutral position, attenuation of sound is negligible. Screws between horn and driver unit. Overall diameter 3″. Fits all Jensen driver units and horns.

JENSEN COMPLETE HYPEX* PROJECTORS

HF-100A WEATHERPROOF TWO-WAY HIGH FIDELITY PROJECTOR

Here is a real high fidelity projector for use indoors or out, under all weather conditions. Consists of a heavy duty 8″ "woofer" feeding a folded horn plus a horn-loaded compression driver "tweeter". Low frequency unit feeds horn by a combination of direct radiation and phase-inversion bass reflex ports for superior efficiency in the low frequency region. The high frequency horn has a 90° fold and is mounted so that the driver unit is at the top, thus providing self-draining and making it impossible for rain, sleet or snow to reach the driver unit.

Horn outer section is spun aluminum with baked enamel finish. Central enclosure is glass fibre reinforced polyester in matching natural molded Modern Tan finish. Sturdy "U" mounting bracket is fully adjustable and positive locking.

Jensen VH-91A and VR-11 Hypex* projectors are the most compact in the line and their use is indicated where speech reproduction is the only important consideration and where size or cost are controlling factors. Designed for maximum efficiency in the upper frequency range, these units provide excellent penetration of noise. Small in size, they can also be located near areas of extreme noise. Magnetic structures are highly efficient, using Alnico 5 magnets in ample soft iron structures. Corrosion-resisting finishes and materials such as plastic cloth base diaphragms insure long life under outdoor and industrial atmospheric conditions. For further protection driver units are completely enclosed inside the rigid outer shell.

MODEL VH-91A HYPEX* PROJECTOR

Equipped with new universal mounting bracket for adjustment in any direction and secure locking with a single wing nut. Extremely rigid vibration-proof clamping allows three hole flange mounting on flat surface, single hole mounting with ¼″ lag or machine screw through center, or mounting on top of standard ½″ pipe.

MODEL VR-11 HYPEX* RADIAL PROJECTOR

For application requiring 360° coverage in horizontal plane, such as low ceiling industrial areas. Equipped with sturdy eye-bolt for clamping or suspension from above.

These new, unusual additions to the Lowell line of speaker baffles are top quality heavy 18 gauge spun aluminum in a buffed satin finish. Designing assures controlled 360° dispersion of undistorted sound. Echo and feedback are at the minimum. Louvres and conical diffuser "float" on very small soft rubber grommets. Baffles are coated with clear lacquer which also serves as prime coat for on-the-job painting. Wide choice of colored lacquer finishes available on request.

Shipped complete with hardware and instructions for mounting to Lowell Protective Speaker Enclosures illustrated.

From architecture to acoustics, Lowell STL series meets every requirement — in ultra-modern design . . . for even, undistorted low-level sound distribution throughout 360°. Recommended baffle placement is usually 25′ from center to axis. Where straight line placement is impossible, triangulating the baffles in the ceiling is highly effective.

Top quality, heavy gauge satin finished spun aluminum. Assures controlled 360° diffusion of undistorted "ear-level" sound with minimum of echo and feedback. Conical diffuser "floats" on soft rubber grommets forming a press fit to aluminum support studs which thread to speaker housing ring. Clear lacquer coating also serves as prime coat for on-the-job painting. Wide choice of colored lacquer finishes available on request. Shipped complete with hardware for mounting to Lowell Protective Speaker Enclosures illustrated.

360° Coverage Low "Ear-Level" Sound

Even undistorted sound. Recommended baffle placement 25' from center of axis. Where straight line placement is impossible, triangulating baffle in ceiling is highly effective.

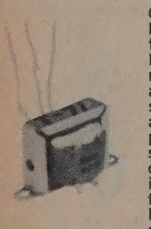
LINE TRANSFORMERS

CONSTANT VOLTAGE: UNIVERSAL IMPEDANCE—MATCHING TYPES—Individually Boxed



CONSTANT VOLTAGE LINE TRANSFORMERS for matching speakers to 70.7V or 25V constant voltage line. This method greatly simplifies matching several speakers to an amplifier, especially when the speakers must produce different amounts of power. The most complicated matching problem can be solved by adding the power required by all speakers and comparing to the rated power of the amplifier. These transformers are of the highest quality of response and efficient use of power.

POLYDIRECTIONAL RIBBON MICROPHONE—77DX

The standard quality microphone of the broadcast industry, the RCA Type 77-DX, is available in two models; one with a low-gloss finish for TV, the other a satin chrome and gray enamel finish for AM and FM. The 77-DX offers a choice of unidirectional, bidirectional, or nondirectional pickup patterns which are easily changed by a selector switch. Three frequency response variations on the basic pickup patterns may also be obtained, thus a total of nine different directional characteristics may be utilized. The 50 to 15,000 cycle frequency response of the 77-DX makes it suitable for every high fidelity broadcasting and recording application. The low-hum pickup level (−128 dbm) makes the 77-DX useful in high-hum areas. Output impedance is factory connected for 250 ohms; however, it may be easily reconnected for a 30 to 150 ohm output impedance. The effective output levels are −50 dbm in the bi-directional pattern, −53 dbm and −56 dbm in the uni- and non-directional patterns (EIA ratings, −144 db, −147 db and −150 db respectively.

This microphone mounts on a standard ½-inch pipe thread which can be adapted to ⅝-inch-27 thread. The 77-DX is supplied with a protective cloth zippered bag, and 30 feet of three conductor shielded cable, less plug. Overall dimensions are 11½ inches long, 3¾ inches wide and 2¼ inches deep.

77-DX Satin Chrome Finish (MA-2311) **$206.00***

77-DX Low Luster Gray Finish (MA-2312) **$197.00***

BI-DIRECTIONAL RIBBON MICROPHONE—BK-11A

All the advantages of the famous 44-BX microphone have been combined with the latest developments in ribbon microphone design to produce the new BK-11A general purpose microphone. In the studio or at indoor remotes, whether a simple interview program or full orchestra pickup, the bidirectional characteristics and excellent frequency response (30 to 15,000 cycles) make the BK-11A an extremely useful production tool. The BK-11A has an effective output level of −56 dbm @ 1000 cycles (EIA rating, −147 db). The output can be connected for 30, 150, and 250 ohm operation. A three position switch permits selection of desired frequency ranges for voice and music.

The BK-11A has been designed for use with the inexpensive MA-2306 desk stand, and it can also be used with any standard ½-inch pipe thread desk or floor stand. Thirty feet of three conductor cable is supplied without a connector.

BK-11A (MA-2316) **$131.25***

UNIAXIAL RIBBON MICROPHONE—BK-5B

The BK-5B is a high-quality ribbon instrument designed especially for use in high noise areas, as well as being suitable for general studio purposes. The BK-5B makes an excellent control room microphone when mounted on an adjustable microphone arm. Maximum sensitivity of the BK-5B is in the major mechanical axis, and this produces an extremely directional cardiod pattern. Frequency response from 50 to 15,000 cycles permits using the BK-5B for all types of high fidelity voice and music pickups. The effective output level is −56 dbm (EIA ratings, −150 db). The output is connected for 250 ohms, but may easily be changed to 30 or 150 ohms. The low-luster umber gray finish makes it ideal for TV.

It is supplied wih thirty feet of three conductor cable, less connector. A wind-screen is available for outdoor use. The BK-5B is supported by a fork mounting which has a ⅛-inch straight pipe thread.

BK-5B (MA-2314) **$146.50***

DIRECT PRESSURE LAVALIER MICROPHONE—BK-6B

The BK-6B is a lightweight microphone with excellent speech balance, ideal for remotes, interviews, and other applications where an inconspicuous microphone is needed. The 2.3 ounce unit is 2$\frac{9}{16}$ by 1$\frac{5}{16}$-inches, and its effective output level is −67 dbm (EIA ratings, −158 db). Wide range frequency response (80-12,000 cps) permits using the microphone for all speech applications. The 250 ohm output impedance may be changed to 30 or 150 ohms by a simple change of cable connections. Hum pickup is very low (−112 dbm).

The small size and lanyard mounting make the BK-6B extremely versatile. Thirty feet of three conductor cable is supplied, less connector.

BK-6B with lanyard and fastener (MA-2315)....**$86.00***

BI-DIRECTIONAL RIBBON MICROPHONE SK-46B

The SK-46B is designed for high quality indoor use. It has excellent frequency response and bidirectional pickup characteristics. Output impedance is 200 ohms, but it may be reconnected to produce a 15,000 ohm output. Effective output level is −58 dbm at 250 ohms (EIA rating, −150 db) or −60 dbm at 15,000 ohms. Dependable performance as well as attractive styling make the SK-46B an ideal choice for applications requiring an economical high quality microphone. The SK-46B has a ⅝-inch—27 mounting thread and is supplied with 25 feet of two conductor cable (less connector).

SK-46B (MA-2319) **$49.00***

NON-DIRECTIONAL PRESSURE MICROPHONE—BK-1A

Ideal for outdoor use or wherever constant handling is required the BK-1A offers smooth response for both voice and music. The BK-1A is also an excellent unit for sports, panel shows, interviews, and remotes. The pressure actuated microphone provides uniform response from 60 to 10,000 cycles. The swivel mounting of the BK-1A can be used to control directional characteristics. The vertical position is nondirectional the horizontal position is semidirectional. The output impedance is 250 ohms, but 30 and 150 ohm connections are included. Effective output level of the BK-1A is −52 dbm (EIA ratings, −148 db) while hum pickup is below −102 dbm.

The BK-1A may be mounted on any type stand having ½-inch pipe thread and is perfect for use with the MA-2306 desk stand. Thirty feet of three conductor cable is supplied, less connector.

BK-1A (MA-2313) **$73.50***

NON-DIRECTIONAL PRESSURE MICROPHONE—SK-45B

Ideal for talk-back, cue, and public address use, the rugged lightweight SK-45B microphone offers good voice reproduction. This dynamic microphone is essentially nondirectional with a −56 db output level (EIA rating, −147 db) when connected for a 150 to 200 ohm balanced output, and −58 db when specially connected for a 15,000 ohm output. Response from 70 to 12,000 cycles makes it excellent for announce work. Mounting with any ⅝-inch—27 fixture thread permits the use of low cost stands. Finish is low gloss gray, and the SK-45B is supplied with 25 feet of cable less connector.

SK-45B (MA-2318) **$45.00***

NON-DIRECTIONAL PRESSURE MICROPHONE—SK-39A

Cue and talk-back applications are perfect for this inexpensive dynamic microphone. The SK-39A is rugged and relatively insensitive to mechanical shock and wind. Its plastic diaphragm makes it impervious to moisture and rain. Output level is −55dbm (EIA rating, −150 db). The SK-39A may be used with amplifiers having a 250 ohm input. The umber gray unit may be mounted on any ⅝ inch—27 fixiutre thread. The 15-ounce microphone is supplied with 25 feet of two conductor cable (less connector).

a new breakthrough in microphone design . . .

SHURE MODEL 488 NOISE-CANCELLING MICROPHONE!

Outperforms and obsoletes all other . . . confirmed by extensive laboratory and field comparison tests!

Provides highly intelligible speech communication in mobile and fixed-station use where high volume background noise is found, such as airplanes, helicopters, motorcycles, trucks, fire engines, power boats, sporting events, drop forges, press-rooms, engine-rooms, factories. The 488 incorporates the patented Shure Controlled Reluctance cartridge into a distance discriminate microphone that effectively cancels background noise to permit transmission under conditions that would be impossible with any other microphone. Correct placement of microphone for close-talk use is assured by convenient rubber lip-guard. Rugged, impact-resistant "Armo-Dur" case is lightweight, easier to handle in extremes of temperature. Four versions of the 488 are available: 488A — high impedance; 488B — low impedance; and 488C and 488T — transistorized for direct replacement of carbon microphones (488T FAA Certified for Aircraft applications). All models equipped with coiled-cord and long-life heavy-duty push-to-talk switches. Field-testing these blade-type switches confirms their operating life rating to be in excess of one million cycles.

drivers

MODEL ID-20 (20 watts) For speech and music systems requiring moderate sound power output, and where performance with economy is a primary consideration. Designed to deliver maximum output, the ID-20 utilizes its efficiency to the best advantage, producing a substantial "punch" with clear, penetrating sound.

MODEL ID-30 (30 watts) Redesigned version of the world famous MA-25—ideal for installations requiring single medium power units or multiple driver/horn arrangements. The ID-30, with its unusually wide upper midrange response (up to 7500 cycles), produces musical balance and noise penetration far in excess of higher-cost competitive models. Completely weatherproof with tropicalized 2" voice coil and breakdown-proof linen base diaphragm. A top value!

MODEL ID-40 (40 watts) Latest, maximized version of the famous, earlier Model SA-HF, often referred to as the "workhorse" of the sound industry, and widely used by high fidelity manufacturers and audio hobbyists as well. Extended high frequency response and excellent efficiency assure an essentially uniform response characteristic for pleasing, natural reproduction of speech and music, while delivering that extra "punch" needed to cut through heavy noise. Tropicalized and weatherproofed, the ID-40 can be relied upon to give continuous top-flight performance under adverse weather conditions.

MODEL ID-40T (40 watts) Offers the same power capacity, efficiency and frequency response as the ID-40, and incorporates a built-in line-matching transformer. The transformer terminal plate is inside the rugged, die cast aluminum housing; entrance is made through an exclusive watertight dural gland nut, assuring positive weatherproofing after connections have been made. Terminals are labeled in impedances and in wattage consumed on "constant voltage" lines. Transformer impedances: 45/122/250/500/1000/2000 ohms. 70 V. line power taps: 40/20/10/5/2.5 watts.

MODEL ID-60 (60 watts) The premium compression driver in the world famous University line. Ideally suited to applications requiring the greatest power handling capacity, maximum efficiency, widest range frequency response, and rugged construction that will withstand a lifetime of hard use. Extra large, super-power all-Alnico V exclusive "W" magnet eliminates full 50% of reluctance losses normally present in other designs. Minimum gap width gives lowest leakage, and maximum gap flux density, resulting in peak electromechanical efficiency. Use of rugged outercase assures utmost durability even when abused or in hazardous environment. Watertight voice coil terminals are located at the base of the housing, for added convenience and greater dependability. Without question, the ID-60 is the finest wide range, high power Public Address driver unit ever offered.

MODEL ID 60T (60 watts) Similar to the ID-60, but with high-impact plastic outercase, the ID-60T includes a husky built-in line matching transformer, with its terminals immediately available at the base of the driver housing. Ideal for rental work requiring repeated set-up and dismantling of equipment, and for semi-permanent systems where changes in the number or location of speakers are likely to affect line impedance requirements. Transformer impedances: 16/80/165/250/500/1000/2000 ohms. 70 volt line power taps: 60/30/20/10/5/2.5 watts.

Tape Head Demagnetizer — Model HD-40M *(For Tape Recording Heads)*

TAPE HEAD DEMAGNETIZER
MICROTRAN

Permanent magnetizing of recording heads during normal use of tape recorders is a common occurrence. Magnetized heads cause high noise level and harmonic distortion.

The HD-40M Head Demagnetizer, when properly used, removes any residual permanent magnetism from the heads. It consists of a heavy duty alternating current electromagnet with an extended pole piece designed for easy access to the recording heads of most tape recorders. When energized, contact of the demagnetizer pole piece with the pole tip of the recording head causes the head to be saturated by an alternating magnetic field. Gradual removal of the head from this saturating field neutralized any residual permanent (DC) magnetism in the recording head.

- Removes permanet magnetism
- Reduces noise level
- Reduces harmonic distortion
- Improves signal to noise ratio
- Insures high frequency response
- Reduces hum of tape head
- Special finish on pole piece prevents marring recording head surfaces
- Rating 117 volts AC, 1 AMP.
- FINISH: High impact molded epoxy
- SIZE: 4" Long x 1¼" Diameter
- WEIGHT: 7 ozs.
- Model HD-40M—USER NET: $6.15

STANTON STEREOTABLE®

...a complete system!

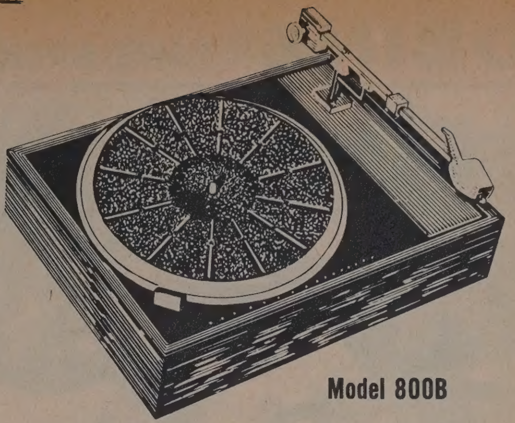
PERFECT for stereo—STANTON precision stereo components combined to function as one perfect system for the finest quality stereophonic or monophonic record reproduction.

Here are the components—each performing precisely . . . faithfully . . . reproducing only the music in a record—without adding a whisper of sound.

STANTON Gyropoise® Stereotable—the mechanical component of the system that provides precise motion, revolving on a "cushion-of-air" in magnetic suspension. There is no stiff mechanical linkages to cause annoying vertical or horizontal rumble. The exclusive STANTON isolated motor mount allows the base of the system to dissipate any trace of vibration. Unified design of the arm and platter suspension eliminates any possibility of mechanical feedback.

STANTON UNIPOISE® Arm—the mobile component of the system that carries the sensitive cartridge as its stylus traces the complex groove of a stereo record. It performs soundlessly, and its exclusive patented/single pivot bearing provides friction-free motion in all planes. Its ultra-lightweight construction gives the lowest possible mass for tracking all records at extremely light pressures—extending life of both stylus and record.

STANTON Professional Standard Stereo Fluxvalve Cartridge-designed for professional use in manual transcription arms, the STANTON 400A is an ideal pickup for this system. Hermetically sealed and fully encapsulated in precious mu-metal for a lifetime of trouble-free and hum-free performance. Equipped with the exclusive STANTON V-GUARD diamond stylus assembly which is easily replaceable without the use of tools.



STANTON Model 800B Stereotable: A complete record playing system pre-wired for connection to high quality stereo high fidelity components. Components of the 800B include: Model 800B STANTON Gyropoise Stereotable; Model 200 STANTON UNIPOISE Arm; Model 400A STANTON Stereo Fluxvalve Cartridge; STANTON walnut base assembly. Dimensions: 14½" wide by 14½" deep—overall height is under 6".

NOW! THE ULTIMATE IN INDEPENDENT TONE ARMS

SHURE SME

MODELS 3009-3012 SERIES 2

The most remarkable independent tone arm ever made — by any standard. Brings out the very best from any high quality cartridge, mono or stereo. Virtually frictionless bearings, both horizontal and vertical . . . pivot friction at stylus tip measures less than .020 gram! Knife edge bearings are absolutely protected against dust. Manufactured to incredibly close tolerances for Shure by skilled British craftsmen. Unprecedented combination of adjustments: height, overhang, length (up to 1"!), tracking force (so accurate no pressure gauge is required, ever) . . . even bias (to counteract tendency of arm offset to pull toward center of record and "favor" one side of stereo groove over the other.) The result is an independent tone arm that carries the cartridge over the record surface with rock-like steadiness and precision — literally eliminates wear on the record and stylus. Lever operates arm through hydraulic damper.

No resonances within audible spectrum! Complete with shell, alignment protractor, sockets.

CABINET ASSEMBLIES AND AMATEUR ACCESSORIES

BUD CONSOLE ASSEMBLIES

Variety of panels, sides, doors, pedestal, table tops and drawer permit easy assembly of a variety of console units, custom made to individual requirements. Typical basic unit would consist of one pedestal, an end pedestal, three or more panels, a door, a table top and a foot rest as illustrated. Many variations of this basic design may be made, and additions or changes in design can be accomplished at any time. Because the system is sold in parts, it offers the user the highest versatility in designing or expanding units as needed.

BASIC PEDESTAL

Consists of top, bottom and four panel-mounting channels drilled and tapped to accept standard 19″ panels on each of four sides. Bottom is slotted so that sides or doors may be installed on any side. Three knock-out holes provided on each of two sides for use in assembling pedestals in series. Channels will support 200 lbs. suspended between them; bottom will support 500 lbs. Bottoms have recessed mounting brackets for hidden caster attachment. Shipped knocked-down, with necessary hardware. **Size:** 22″ w. x 22″ d. x 29 13/16″ h.

END PEDESTAL

May be used as a housing or as a support. Panel mounting rails are drilled and tapped for mounting panels on each of two sides. Accepts full size solid or louvered panels, ball-cornered doors or sides. Base has hidden caster mounting supports. When used, No. CT-2206 table top is required; eliminates the need for a second CP-2200 pedestal. **Size:** 22″ w. x 5″ d. x 29 13/16″ h. inside.

PANELS

Full-sized panels may be used to enclose the openings on any side of either of above pedestals. Available either solid or louvered. Louvered panels can be positioned with louvers pointing down or up, inside or outside the pedestal. **Size:** 24 15/32″ h. x 19″ w.

BALL-CORNERED SIDE

Can be used to enclose any side of either of above pedestals for an enhanced appearance. Attach by tongue and slot arrangement at the bottom; and, two screws at the top. Quickly removable from exterior of pedestal for service or inspection. Provide sufficient clearance for installation over knobs and dials. **Size:** 25 1/16″ h. x 20¼″ w. x 1 1/16″ d.

BALL-CORNERED DOOR

Unique hinge and locking arrangement designed so that door may open from right or left side. Attaches to any side of either pedestal with sufficient clearance for knobs, and dials. **Size:** 25 1/16″ h. x 20¼″ w. x 1 1/16″ d.

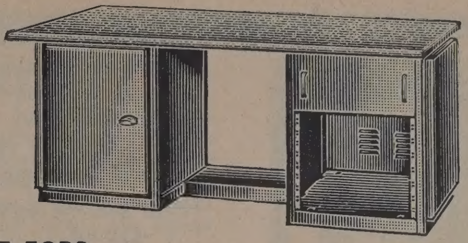

TABLE TOPS

Made of 16 ga. steel and available in three lengths. Adjustable from front to back in three positions to allow overhang as desired. Attach to the pedestals by means of brackets welded to underside of top. **Size:** 30″ w. x 1 1/16″ thick.

FOOT REST

Joins two pedestals or one pedestal and one end pedestal, depending on the size top used. Adjustable in two positions, front to back. **Size:** 22″ l. x 10″ w. x 2⅝″ thick.

CONSOLE DRAWER

Fits into pedestal in any position from top to bottom. Slides easily on nylon rollers. Capable of supporting heavy loads. Drawer extends to full depth of pedestal. Easily removable slides fasten to mounting channels in pedestal; stops prevent drawer from falling out. **Size:** 16¾″ w. x 19⅜″ d. x 6 7/16″ h., inside.

L M B
PRESENTS SOMETHING NEW IN CHASSIS —

THE CHASSIS WITH THE CAP COVER AS ORIGINATED BY LMB

Built with the new original LMB popular cap cover construction. This construction enables the builder to use either the top or the bottom of the chassis for construction. The Chassis can also be mounted on its side and construction can be on both top and bottom at the same time. Sturdily built from Aircraft quality aluminum, Type 3003, H-14, the same material as is used in the construction of all LMB precision box chassis. Special technique in welding the corners makes for a stronger chassis than the orthodox type. Cap construction allows for using all the space inside the chassis without being hindered by the mounting flange, which takes from 10% to 20% of the mounting space out of the average chassis.

The P Series are perforated on all four sides and are ideal where heat dissipation is a factor. LMB chassis — the better chassis, with the year's ahead advanced construction for your better project application. An advanced quality product competitively priced.

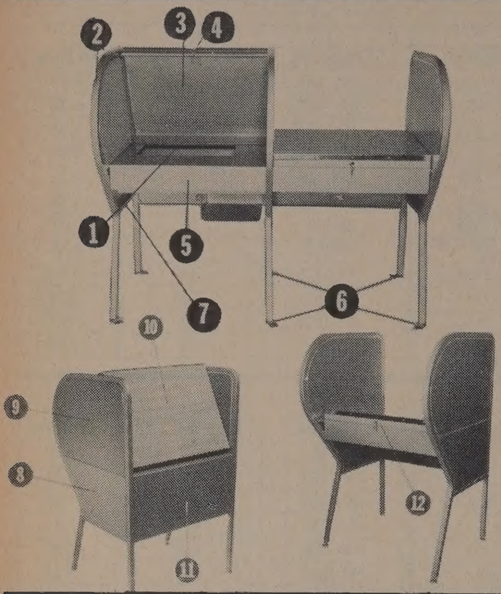
ALL METAL LANGUAGE LABORATORY FURNITURE



METAL WORKS new design in Student Booths brings you "tomorrow's booth" today! Featured below are three views of the 500 Series. These booths are designed to minimize noise entering the booth and prevent the students' response from adding to the general noise level. Designed to meet today's needs in an ever expanding educational program, they can be added to as funds permit, or as the language program expands, by simply bolting on additional units, consisting of only 1 leg and deck. They are adaptable to flush mount any tape recorder. Design is simple, yet unique in that the curved one piece leg conformation does away with sharp corners. No part of the booths protrude into the aisle leaving all aisle space clear for passage. 'K' leg permits easier entry and discharge from booth.

WHY METAL BOOTHS ARE BEST FOR SCHOOL USE

Metal Booths provide an important safety feature, insuring that all accessible surfaces are at ground potential. Metal Booths also provide better head dissipation permitting equipment to run cooler, and are less resonant than wood or plywood. An installation providing less mechanical hum from deck. Complete information about Metal Works all metal language laboratory furniture furnished on request.

DETAILS OF CONSTRUCTION AND ASSEMBLY

RACK CONSTRUCTION:

The frame shown is used on series "FL", "FR", "PL", and "PR" racks. The top and bottom is made from 7/64" steel. The four uprights are also 7/64" steel, and have multiple-formed angle bends to insure rigidity. Series "PX" and "FX" racks are similar, except that the solid side walls are made from 1/16" steel. The entire assembly is securely welded to form an integral unit.

- **BOLT RETAINER RAILS:**

To these are bolted the panel mounting angles and vertical side supports, which may be located at any position from front to back. These rails are made from 7/64" steel, and are rigidly welded in place. Angles and supports are securely fastened to rails with 3/8" diam. steel bolts, lock washers, and hexagon nuts.

- **PANEL MOUNTING ANGLES:**

They are made from 1½" x 1½" x 3/16" thick structural steel. All holes are die punched to provide accurate spacings with close tolerances; holes are tapped 12/24 thread on 5/8"-5/8"-½" universal spacings for standard rack panels. Additional angles may be purchased for mounting terminal blocks or other devices.

- **VERTICAL SIDE SUPPORTS:**

These supports are fastened to the same bolt retainer rails used for securing the panel mounting angles. Holes are 5/8"-5/8"-½" universal spacings tapped 10/32 thread, to provide maximum adjustment for side mounting brackets and equipment shelves. They may also be used for attaching slides or other custom made brackets. The supports are made from 7/64" thick steel, locked in place with 3/8" diameter screws, lock washers and hexagon nuts, to afford maximum support.

- **SIDE MOUNTING BRACKETS:**

These may be used separately or with shelves as shown. Slotted holes on the brackets provide any vertical adjustment required.

DOORS:

For sake of clarity, doors are not shown on the frame drawing. They are stamped from one piece of 1/16" steel, and "dutch-formed" on all sides providing smooth double-thick edges. Adequate ventilation is obtained from full ventilating (venetian-type) louvers. Lock type handles are supplied on racks with both front and rear doors. Non-locking handles are used on racks with rear doors only; locking type handles are optional.

- **OUTLETS:**

"Knockout holes" are available on cabinet side for connecting cables; a duplex outlet, outlet box and plate are mounted on cabinet under rear door.

- **RECESSED SUB-BASES:**

They are available for all universal type racks as an optional accessory.

- **FLOOR LEVELERS:**

Four are supplied with all universal type racks.

SERIES "FX" RACKS
With Front and Rear Doors

Series "PX" and "FX" racks are similar to our "PR" racks listed on **PAR-METAL Page 6** except that they are constructed with **SOLID SIDE WALLS** as shown. Where open side racks are not required, the cost of detachable side panels is eliminated.

These racks feature the same horizontal mouldings and corner trims used on our "PR" series, resulting in a trim, compact appearance. The new styling, in effect, provides an attractive frame around the front of the rack where contrasting color finishes are used.

STANDARD EQUIPMENT: All racks are equipped as shown, with door(s), one pair of panel mounting angles, and all necessary hardware. Recessed sub-bases are not included, but listed as an optional accessory.

CORNER TRIMS: Narrow type corner trims are standard to permit assembly with all accessories and sliding shelves. Where racks are assembled in groups or rows, please specify number of racks in each row so that proper joining trims can be supplied.

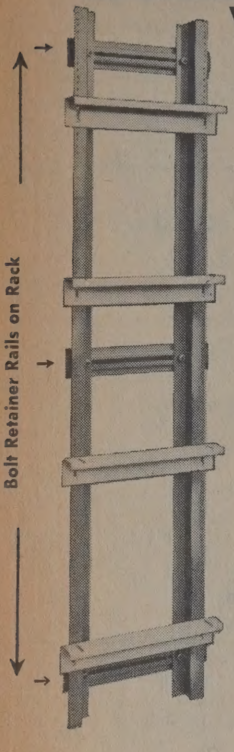
PAR-METAL CABINET RACK ACCESSORIES

VERTICAL SIDE SUPPORTS



Bolt Retainer Rails on Rack

These vertical side supports are supplied in sets of four uprights to fit all Modular racks listed on PAR-METAL Pages 4 thru 9. (Cut shows side mounting brackets in place which are sold separately — see listing below).

Supports are fastened to bolt retainer rails which hold panel mounting angles in place, and are adjustably mounted from front to back of rack. Holes are **drilled** and **tapped vertically** to provide adequate vertical adjustment for mounting brackets, shelves, and various sliding devices.

When installed in racks for 19" wide panels, the clearance between supports (from right to left) is 17¾". On 24" wide panel racks, the clearance is 22¾"; on 30" wide panel racks, the clearance is 28¾". Supports are 2⅝" wide and 1½" deep.

Supports are made from 7/64" thick steel, finished in aluminum enamel. Each set is supplied with ⅜" dia. bolts, lock washers, and nuts for rack mounting.

The front slopes at an angle of 20°, and it may be used with the slope upward or downward (see illustrations) on PAR-METAL Page 1.

Front and back have removable panels. They are designed for single unit or modular group assemblies.

Constructed from 1/16" sheet steel; panels are included in prices listed below. Available in all finishes—please specify when ordering. **All panels are 7⅝" deep.**

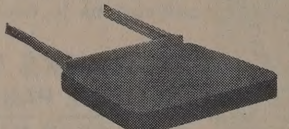
RACK TYPE EXTENSION TABLES



These tables are mounted to the front of cabinet racks as illustrated on PAR-METAL Page 1. They are made from ¾" plywood to which is bonded 1/16" thick formica of a dark grey pattern on both top and apron, which is 2½" high.

The apron is substantially reinforced for fastening to horizontal channel type supports. The channels are made from 7/64" thick steel, and are bolted to vertical side supports which are securely mounted on the inside wall of the rack. The tables may be adjusted at any height from the floor. This assembly provides a very rigid structure, with a smooth writing space across the entire top. There are no metal parts exposed, and no painted metal surfaces to deteriorate with constant usage.

The tables may be installed on any of the cabinet racks (without front door) listed on PAR-METAL Pages 4 thru 9. They are also available for modular rows of four or more racks.

ALL OF THESE TABLE ASSEMBLIES REQUIRE ONLY 3½" OF PANEL SPACE (height).

PANEL MOUNTING ANGLES

These panel mounting angles (or strips) are the same as used in all Modular type racks (see PAR-METAL Pages 4 thru 9). They are supplied with necessary bolts to fit into the bolt retainer rails which hold the pair of panel mounting angles regularly supplied with each rack (see PAR-METAL Page 3 for further description).

It is often desirable to use an additional pair of panel mounting angles for mounting chassis, terminal strips, etc. They may be adjusted to any depth within the rack from front to back.

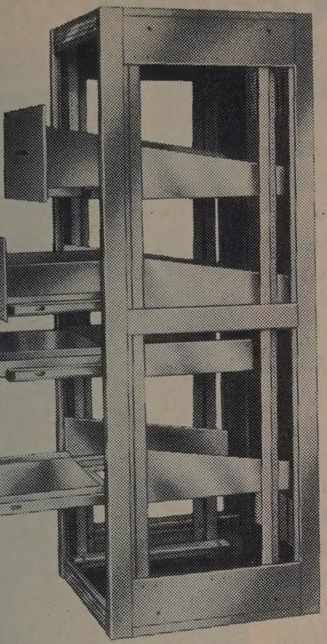
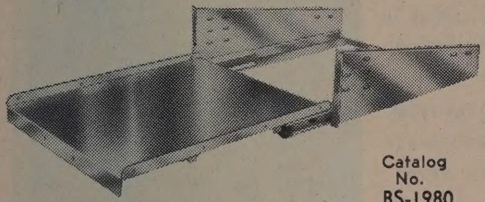
PAR-METAL RACK TYPE SLIDE ASSEMBLIES





GENERAL DESCRIPTION

These slide assemblies will save considerable layout and assembly time as an alternate method of attaching individual slides directly to the interior of a rack. All models are screw mounted to the front panel mounting angles of relay racks, the same as regular panels. Additional holes are provided in the side brackets of the shelf assembly for mounting to our standard vertical side supports. Either method will provide a rigid support; both may be used together where desirable.

The basic slide assemblies for use in 19″ wide panel **racks will accommodate chassis up to 17″ wide.** All of the "usable space" noted below may be fully extended from the front of the rack; load capacities are based on the shelf in this position. All units are ruggedly constructed to withstand constant usage. The frames and brackets are made from 7/64″ thick steel. All parts are securely welded or fastened with stainless steel rivets.

BASIC SLIDE ASSEMBLIES

The basic slide assembly illustrated is sold as a complete unit, ready for installation in all 18″ or 24″ deep racks. Panels may be attached to chassis by using standard *brackets or any other convenient method. The panel and chassis assembly is then bolted directly to the slide pan. Formed panels with a minimum height of 7″ are recommended. Four models are listed to fit racks using panels either 19″ or 24″ wide. The BS-1940 and BS-2419 are identical in size, but have different load capacities. All load capacities are conservatively rated to carry the full load with the sliding shelf completely extended. All parts are zinc plated.

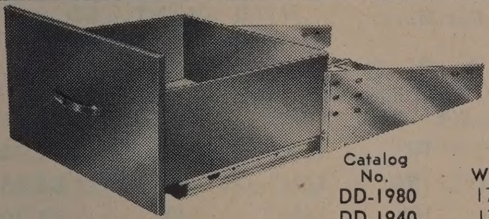
Special brackets are available for mounting rack panels, as listed on Par-Metal page 19.



STORAGE DRAWER ASSEMBLIES

These drawers are suitable for stationery, instruments, parts, etc. The drawers are mounted on the basic slide assemblies described above. They are available either 7″ or 10½″ high to match standard rack panels of the same height. Three models are listed for racks with 19″ wide panels, and one for 24″ wide panel racks.

DESK SHELF ASSEMBLIES

This assembly effectively provides a retractable writing desk, or may be used for supporting test instruments or other devices. When not in use, it saves valuable aisle space. The writing surface is charcoal grey micarta. The front requires only 3½″ of panel space, and is provided with a drawer pull. It is made for racks using panels either 19″ or 24″ wide. No. SK-1970 and SK-2419 are identical except for load capacity.

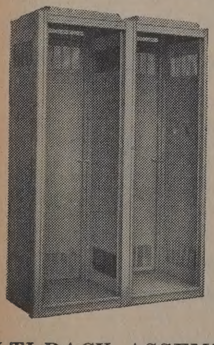
MULTI-RACK CABINET ASSEMBLIES



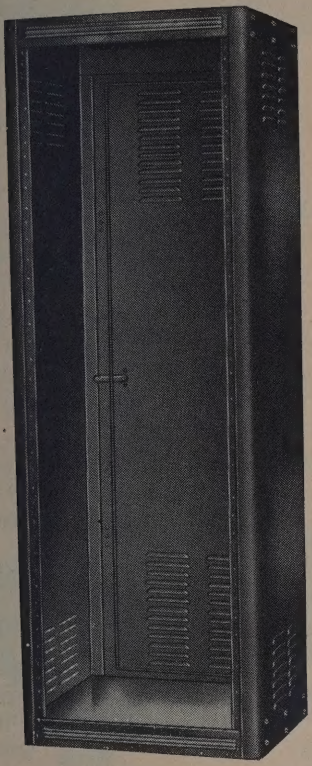
MULTI-RACK ASSEMBLY

MULTI-RACK ASSEMBLIES: Both **Series "ER"** and **"FD"** racks may be set up in rows as shown. The use of "venetian type" louvers provides a flat exterior surface on the sides of the racks; separate side plates with welded screw studs inserted at top and bottom of adjacent sides simplifies the assembly — no screwdrivers or wrenches are needed. Vertical joining trims overlap the joint between racks on the sketch.

SERIES "FD" RACKS: This series with front and rear doors has adjustable panel mounting angles, which may be located at any distance from front to rear of rack. VERTICAL SIDE SUPPORTS listed on Par-Metal Page 10 will fit into these racks.

PAR-METAL TYPE "A" RELAY RACKS

ROUNDED CORNER TYPE—FOR 19″ WIDE PANELS



"ER" SERIES

The vertical front corners are nicely rounded, and the top and bottom are trimmed with chrome finished mouldings. The panels fit into a recess, so that the edges are not exposed.

CABINET: Entire cabinet is constructed of 1/16″ thick cold-rolled steel. These racks are shipped "knocked-down" with necessary bolts for easy assembly. Screws for mounting panels are supplied.

PANEL MOUNTING: Angle irons are 7/64″ thick steel, holes are accurately drilled and tapped 10-32 thread for all types of panels.

HARDWARE: Doors are of same design as our universal racks. **"SERIES ER-215A"** racks are equipped with "automobile" type non-locking handles on rear doors. On **"SERIES FD-215A"** racks, similar handles with key locks are used on both front and rear doors. Hinges are the "slip-joint" type so that doors may be easily removed.

PAR-METAL CHANNEL RELAY RACKS

DELUXE TYPE RACKS for 19″ and 24″ wide panels

No. RR-197

These DeLuxe Channel Type Relay Racks are **made from 7/64″ thick steel,** and extend the utility and applicability of the standard channel relay rack.

The panel space is 77″ x 19″, to match a standard height used on enclosed cabinet racks.

The upright channels have been modified to an 8″ overall depth, which when combined with a formed recess for the panels, greatly increases the rigidity of the rack. The edges of the panels are not exposed.

The rack is drilled and tapped for 10/32 screws at **both front and back,** permitting the optional use of either panels, or dish type chassis mounted to the racks at both front and back. The **full** panel space of 77″ x 19″ is available on the back, the same as the front.

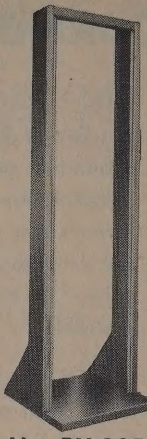
The clear distance between panel mounting flanges (from front to back) is 6-3/4″. It is practicable to use this 6″ depth as an enclosure for dish type chassis listed on Par-Metal Page 19.

When such chassis are mounted at the back, the addition of standard or hinged type panels (see Par-Metal 17) will make a rack enclosure with a clear depth of 6-3/4″.

The top cross-brace is provided with a grille for ventilation where needed. Two holes are located on each side for bolting racks together in rows; there are no projecting screw heads on the sides.

The top brace and the vertical channel members are securely welded together. The base and rear braces are shipped knocked down, with all necessary bolts for assembly. Panel mounting screws are also supplied.

FINISH: Standard finish is black ripple enamel. Blue grey wrinkle or grey hammertone is also available without extra charge if so specified on your order.



No. RX-195

STANDARD TYPE RACKS for 19″ wide panels

These racks are sturdily constructed from 7/64″ pressed steel, and are braced at the back as illustrated. They have been improved by a formed recess for the panels; the edges of the panels are no longer exposed, and the rigidity of the rack has been greatly increased. The two vertical members and the top crossbrace are securely WELDED TOGETHER.

Panel mounting holes are accurately drilled for standard rack panels, tapped for 10-32 machine screws at the front only. An ample supply of panel mounting screws are supplied.

Upright channels are 3″ deep with flanges 1⅛″ wide. Clearance between uprights is 17¾″. Base is 20⅞″ deep and extends both front and rear, and is 21″ wide for either unit.

FINISH: Standard finish is black wrinkle. For blue grey wrinkle or grey hammertone enamel add 10%.

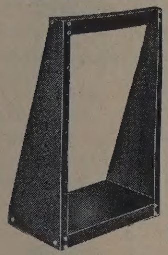
TABLE TYPE RACKS



THESE RACKS are intended for table mounting and are useful where a regular floor type heavy duty rack is not required.

The base is constructed of one piece, similar to a chassis. Mounting holes are accurately drilled on universal centers, tapped for 10/32 screws. They are finished in black ripple enamel and shipped "knocked down" with all necessary screws.

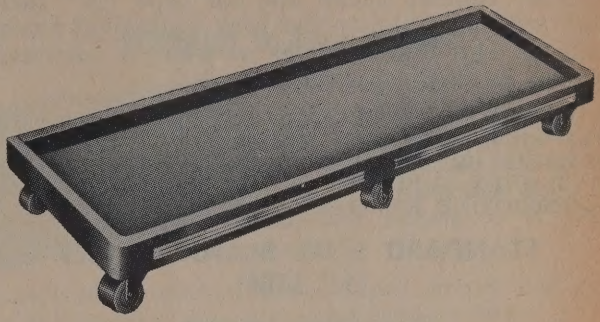
HEAVY DUTY DOUBLE WIDTH ROLLER TRUCKS



It is often necessary to mount groups of 2 of our enclosed racks on roller trucks. The truck illustrated above is used for that purpose. They are similar to our heavy duty trucks except that they have been reinforced with heavier steel because of their greater length.

They are supplied with 6 heavy-duty swivel type casters with 3″ diameter wheels. These casters have a load capacity of 225 lbs. per wheel.

FINISH: BLUE GREY RIPPLE is standard; Black Ripple is optional without extra charge. Also available in Grey Hammertone or primer coat only at an additional cost of 10%.

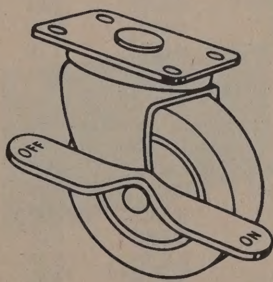
WE CAN SUPPLY ON A "SEMI-CUSTOM" BASIS pressed steel roller trucks for our cabinet racks up to 36″ wide and 88″ long. They can be equipped with 4″ dia. wheel casters and necessary foot brakes. The extra width is used in front of the rack assembly to provide stability where extension shelves and other accessories are mounted on the front of the racks. Drawings and prices available upon request.

BRAKE TYPE CASTERS



During the past few years, the use of brakes on roller trucks has become desirable both as a utility and safety measure. This is particularly true where racks have been loaded to capacity with heavy equipment.

We now have available foot brake type casters as illustrated for use on all heavy duty roller trucks. Brake type casters are supplied to replace the two front casters of single roller trucks and to replace the three front casters of double roller trucks. Additional cost per roller truck is as follows:

For single units (HD-412, etc.)	$ 8.50
For double units (HD-412-2, etc.)	12.75

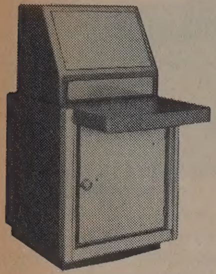
PAR-METAL MODULAR CONSOLE ASSEMBLIES

GENERAL DESCRIPTION

SINGLE UNIT ASSEMBLY



This illustration shows one of our three basic single unit assemblies. Other single unit assembles are shown on the next page.

The combination of a control cabinet mounted on table, desk or similar support usually called a console has been in general use in the electronics industry many years.

While it is obvious that no particular fixed design can serve every requirement, **we have devised a group of standard units,** the combination of which is readily adaptable for specialized applications in control equipment, testing facilities, sound distribution systems and industrial purposes. These models have been functionally designed and smartly styled to keep pace with current trends. New modular units have been added, all of which may be grouped or expanded to meet your specific needs.

The **versatile pedestal racks** are the keystone to the entire assembly. They are constructed for heavy duty use, having all the essential features of our type "PL" cabinet racks listed on PAR-METAL Page 5. This would include panel mounting angles which are adjustable from front to back, and provision for installing chassis mounting brackets and shelves where needed. They offer an efficient utilization of space, complete accessibility for servicing, and are **solidly built** to withstand heavy strains **whether in a laboratory or a moving vehicle.**

Two models of pedestal frames are available, which are identical except for the depth (front to back). PD-224 frame (24¼" deep) unit may be used without an extension desk table as illustrated below.

There are four models of desk panel cabinets suitable for mounting on the pedestal frame top to make a complete console. Single or multiple unit consoles may be combined with our Series "PL" racks.

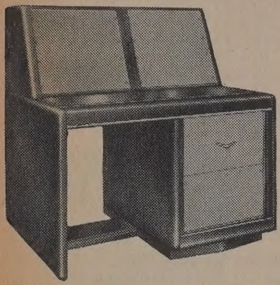
The PD-234 frame (34¼" deep) forms a complete desk structure without the use of extension shelves. When one of our desk panel cabinets is mounted on top, additional space is available in front as a desk writing surface. The 34¼" depth also provides additional interior space.

Unit assemblies are not limited to triple units, and may be extended to modular groups of five or more. If you have a specific problem, do not hesitate to consult us.

The **side panels** are readily detachable from the outside. No drilling or fitting is necessary for the assembly of pedestals, cabinets, brackets, shelves or drawers. All panel mounting holes are tapped for screws—no metal screws or clips are used.

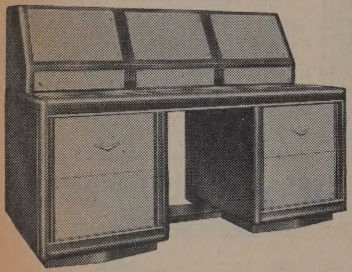
Our standard finish is a combination of light and dark grey hammertone enamel. Other standard finishes, including black or blue grey wrinkle enamel, light grey or medium grey enamel or primer coat only, are optional without additional cost.

DOUBLE UNIT ASSEMBLY



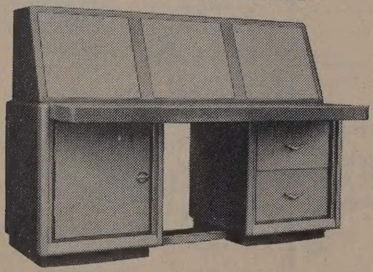
In this double unit assembly, the pedestal rack can also be fitted on the left side.

TRIPLE UNIT ASSEMBLY



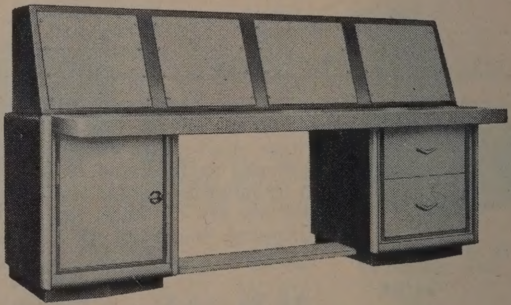
Various triple unit assemblies are available as shown on this and the followng page.

ALTERNATE TRIPLE UNIT ASSEMBLY



The above unit consists of: two No. PD-224 pedestal frames, two No. EP-24 exterior side panels, two No. KP-24 interior side panels, one No. HS-103 high slope cabinet, one No. CD-24 center desk section and one CT-319 extension table, (door drawers, or rack panels for front and back are optional).

TYPICAL QUAD UNIT ASSEMBLY



The above unit consists of: two No. PD-224 pedestal frames, two No. EP-24 exterior side panels, two No. KP-24 interior side panels, one No. HS-104 high slope cabinet, one No. CD-24-2 center desk section and one CT-419 extension table, (door drawers, or rack panels for front and back are optional).

EXPAND-A-RACK SERIES

DESCRIPTION:

A. When it is necessary to join two or more racks together, WYCO METAL PRODUCTS offers the "EXPAND-A-RACK" series.
B. Figure "A" shows two Expand-A-Racks joined together.
C. Figure "B" illustrates the method of expanding your present rack space. In place of purchasing an additional rack, a unit, consisting of the following items, would be bought: (a) the door; (b) the top; (c) the bottom; (d) an Expand-A-Rack joining unit. The right or left side of your existing relay cabinet rack is dis-assembled and replaced with an Expand-A-Rack joining unit. Following this step, the top and bottom are assembled. The cabinet side removed from the original rack is then fastened onto the second rack. Upon hanging the additional door, two complete racks are now joined together.
D. Wyco's Expand-A-Rack series may be purchased by one of two methods. One method consists of buying one complete rack (the "W" series) plus one Expand-A-Rack unit. If you already have one of our basic "W" series cabinets, then order an Expand-A-Rack unit.
E. Supports are electronically welded to the bottom to receive our casters (#RC-100).
F. There is an ample amount of compound knockouts in the Expand-A-Rack joining unit center partition. This allows cables and leads to be taken from one cabinet to the other.
G. Available in Grey or Black Wrinkle and Silver Grey Hammertone.

AEROVOX CAPACITORS

ELECTROLYTICS

TYPE AFH (85°C) TWIST PRONG ELECTROLYTIC CAPACITOR

SINGLES • DUALS • TRIPLES • QUADS

The outstanding line of twist-prong mounting electrolytic capacitors with all the latest refinements — 85°C operation — high purity aluminum foil construction through out — improved moisture resistant seal. Types AFHS-PWHS are specially constructed for high ripple current circuits. PWH and PWHS are constructed for printed wiring board applications.

These units operate over a wide temperature range with a minimum change in capacitance.

While designed for filter audio bypass applications in Radio-TV and Amplifier equipment as exact replacements, many values are rapidly gaining acceptance in industrial applications.

They are manufactured to meet all requirements of EIA specification number RS-154. Capacity tolerances of this specification are listed below.

ELECTROLYTIC CAPACITY TOLERANCES

0-50 Volts	—	—10 +250%
51-350 Volts	—	—10 +100%
351 Volts & Up	—	—10 +50%

Aerovox Corporation is currently working on a size reduction program. Many sizes shown in the following listing reflect latest design figures. However Aerovox reserves the right to furnish previous catalog sizes until present stocks are depleted.

The AFH capacitors listed here include only those ratings which might find usage in industrial applications. A complete line of 1152 ratings may be found in the latest Aerovox Catalog, IDC 563, and may be requested from Aerovox Corporation, Distributor Division, or through your nearest authorized Aerovox Industrial Distributor.

SINGLES • DUALS • TRIPLES • MULTIPLES

Metal Can Tubular Electrolytic Capacitors TYPE PRS-AC (AC rated units) NP-PRS (non-polarized units)

Compact, electrolytic tubular capacitors furnished in aluminum cans with cardboard insulating sleeves. Designed for use in television and radio applications where space is at a premium.
Included in this listing are the AC rated units (PRS-AC) and non-polarized units (NP PRS) for replacement use in cross-over networks and color TV receivers.
Single section capacitors are furnished with bare tinned copper leads 3 inches long. Negative grounded to case. Multiple units are furnished with insulated, stranded copper leads 5 inches long. Negative is common and grounded to case. Multiple units have common cathode.
Sizes listed are diameters over cardboard insulating sleeve. For actual can size deduct 1/16" from diameter and 1/4" from length. Multiple units are supplied with mounting strap. If mounting strap is required on single units, specify on order.
Tolerance and surge voltage are in accordance with EIA Specification RS-154.

The factory is currently in the process of reducing sizes of this type. Aerovox reserves the right to ship sizes listed below until present stock is depleted and smaller sizes as they become available.

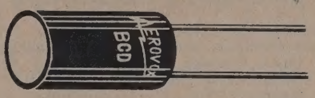
TYPE B C D UPRIGHT MOUNTING PLASTIC CASED ELECTROLYTICS



"Polycap" cased, epoxy end filled electrolytic capacitors. Upright mounting for replacement in printed wiring, transistorized personal radios and car radios.

Small size and type of mounting make these units ideal for use in any printed wiring circuit.

Plastic case and epoxy end seal offer good moisture barrier which protects against drying out or leakage of electrolyte.

High purity foil insures long life and low leakage.

Minimum 1" lead length assists in threading connections into printed wiring boards even in tightest spaces.

Positive lead is identified by a + (plus) mark on case.

TYPES HCB and NPB
High Capacity Low Voltage Bakelite Cased Electrolytics

Type HCB units are polarized electrolytic capacitors designed for use in industrial applications such as battery eliminators, power supplies, electric fence controls and sound movie projectors. For non-polarized applications in welding and control equipment Type NPB units are available.

Both types feature heavy-duty, moisture resistant bakelite cases which eliminate the need for outer cardboard insulating tubes. Operating temperature range from —40°C to +85°C. Capacitance tolerance up to 150 VDCW —10% +100%, over 150 VDCW —10% +50%. High capacity etched plate construction assures long trouble-free operation. Units supplied with wrap around—footed brackets for vertical mtg.—horizontal mtg. available on Special Order.

ELECTROLYTICS-(Continued)

TYPE QE 61 — QE 71

Type QE capacitors are aluminum electrolytics designed for applications requiring high reliability and long life. Typical applications are in computor equipment, power supplies, telephone networks, industrial electronic equipment and high grade commercial and laboratory test instruments.

These units are manufactured with special high purity materials and processed under controlled conditions of cleanliness with the most modern equipment available. The aluminum container is hermetically sealed and furnished with low screw inserts with a pressure type safety vent provided in the cover.

Operating temperatures for QE61 is —20°C to +65°C. For the QE71 it is —20°C to +85°C. Standard capacity tolerance 2.5 Volts to 150 Volts is —10% +100%. For 151 Volts to 450 Volts —10% +50%. QE61 will be furnished with heat shrinkable mylar tubing which adds only .010 to the diameter and .020 to the length of the can size as shown.

For complete engineering details including ripple currents, dissipation factor, etc., request our latest bulletin NPJ-125.

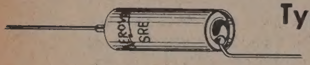
ADDITIONAL STYLES

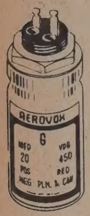
For complete information on any Types shown on this page request Catalog or Brochure from Aerovox Corporation, Distributor Division, or your nearest authorized Aerovox Industrial Distributor.



Type SRE "Bantam" Metal Tubular Electrolytics

Although smaller than the PRS the SRE handles full size loads at operating temperature range of 0°C to 85°C at rated voltage. Sealed in aluminum cans and furnished with a cardboard insulating sleeve. Negative grounded to can. If required without tube specify type SREN.

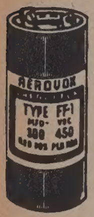
33 Stock Values – 8 Voltages



TYPE G
Insulated Screw-Mounting Capacitors

Hermetically-sealed aluminum can unit, threaded cover size ⅞—16 with hex nut and washer for convenient mounting on chassis. Washer can be used to insulate can from chassis. Terminals molded in cover. Cathode connection thru terminal in cover. These units are the commercial equivalent of case style CE41 and 42 of specification MIL C62A.

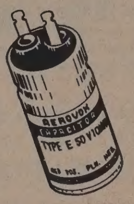
7 Stock Values – 3 Voltages



TYPE FF
Photo-Flash Capacitors

Selective choice of highest purity materials makes these units ideal for rugged photoflash application calling for lowest leakage requirements. Type FF-1 furnished in molded black plastic container, type FF-2 in aluminum can with black glazed tubing; both units furnished with screw lug terminals. Highly resistant to moisture and oil. Surge voltages and time duty cycles as listed in EIA specification No. RS-154.

2 Stock Values

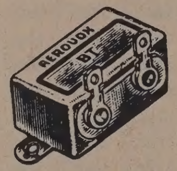


TYPE E
Hermetically-Sealed, Aluminum, Round Metal-Cased Capacitors

Can be mounted with terminals upright or inverted by use of a ring-type clamp provided with unit. Can is floating, thus having two terminals on single-section capacitors, three on duals, and four on triples.

These units are the commercial equivalent of case style CE31, 2 and 3 of MIL Specification C62A.

16 Stock Values – 10 Voltages

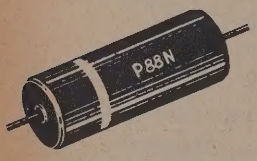


TYPE BT
Drawn-Case "Bathtub" Electrolytic Capacitors

Hermetically-sealed units designed for rigid mounting in minimum space. Of sturdy construction, these high-quality units are commercial equivalent to the case style CE63 of MIL Specification C62A.

21 Stock Values – 6 Voltages

PAPER CAPACITORS



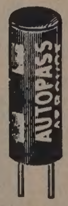
TYPE P88N
†DURANITE
Duranite Blue Molded Tubular Capacitors

Toughest capacitors ever offered for radio-electronic equipment. DURANITE capacitors. Design, impregnant, processing, and casing insure glove-fitting contact and seal throughout. DURANITE provides a permanent, non-varying, rock-hard casing, does not dry out, does not develop cracks or fissures. Pig-tail leads firmly imbedded, won't pull out, won't work loose. Moisture-proof; operate from sub-zero to over 212°F. Exposure to temperatures of 250°F. will not impair life or performance, no deterioration on the shelf. A white band around one end of the capacitor identifies the outside foil.

Type VBC Vibrator Buffer Capacitors

These units are heavy-duty, Hyvol M impregnated, vibrator buffer capacitors in ceramic tubes, specifically designed for severe-service auto-radio applications.

AUTOPASS® Vertical Mounting Plastic-Cased Paper Capacitors



Aerovox Autopass capacitors were specifically designed and developed for use in conjunction with printed-wiring assemblies where it is highly desirable to mount capacitors at right angles to the mounting surface thereby conserving valuable space

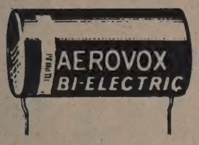
BI-ELECTRIC® MYLAR* PAPER BYPASS TUBULARS

Radial Lead Mounting



Two famous dielectrics . . . quality kraft tissue and Mylar* film . . . are combined with Aerolene impregnant and exclusive "Polycap"® plastic case to bring you a truly superior bypass capacitor. The advanced construction techniques presented in "Bi-Electric" capacitors offer distinct advantages over other radial lead types. "Polycap"® case provides a solid uniform coating from end-to-end. Controlled end-fills provide sealed protection, and leads cannot crack end-fill or pull-out when leads are extended for axial mounting. Standard capacitance tolerance is ±10%. Operating temperature range is —30°C to +100°C.

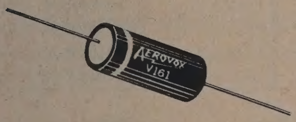
TYPE V161

AEROFILM® (MYLAR*) CAPACITORS



V161 Aerofilm Tubular Capacitors are high quality units in Polycap® cases. These units have exceptionally high insulation resistance and low dielectric absorption and power factor. They are extremely stable having a relatively small capacitance change with temperature variations over a range of 0 to 85°C.

Their excellent resistance to humidity and moisture are due to the use of Aerofilm (Aerovox's trade name for Mylar* polyester film), finest quality casing material, and an epoxy end fill which will not flow, soften or melt at any operating temperature. Standard tolerance is ±20% but also available in ±5% and ±10%.

This type was formerly designated as V84C-V161.

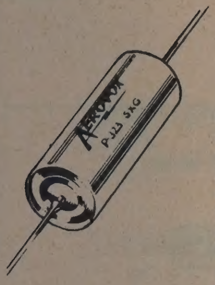
PAPER SUB-MINIATURES



Tubular, metal-cased capacitors, hermetically sealed with glass terminal end seals. Miniaturized, conventional, foil-paper construction. Especially developed to meet high temperature and minimum space requirements of present day electronic equipment. Designed for rugged long life operation, these units are preferred for many of those applications where reliability is a factor. Impregnated with Hyvol "S" a special, high-temperature-operating, stable, liquid impregnant for operation at elevated temperature. These units are capable of withstanding a voltage breakdown test of twice rated voltage between terminals or between terminals and case, for a one-minute period. Ambient temperature shall be plus 25°C. plus or minus 10° C. during this test. Power factor will be less than 1% when measured or referred to a frequency of 1000 cycles per second at 25°C. Type P323S and P323SX are rigidly processed to assure operation over the temperature range of —65°C. to +125°C. The capacitor sections on types P323S utilize an inserted tab construction to obtain minimum size. Type P323SX utilizes extended foil construction for those applications where operation is required at very low AC voltages.

For equivalent types rated —65°C. to +100°C. in the same case size as shown order as P123S, SX, etc. and request prices.

These subminiature units are widely used in many applications because of their high reliability and varied case styles. To order any of these style variations add the suffix letter shown to the basic designation listed.

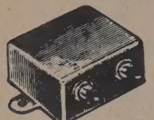
INDUSTRIAL SECTION — MIL TYPES MIL-C-25C



TYPES CP53, CP54, CP55

Hyvol J or H oil impregnated and filled, drawn-metal cased capacitors, immersion proof and hermetically sealed. This unusually compact "bathtub" type capacitor is the most popular of the small units for severe operating conditions. Available with terminals on side (CP53), top (CP54), or bottom (CP55). The standard tolerance on single section units is ±10% (K), on multiple section units +20 —10% (V).

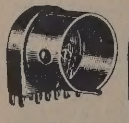
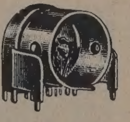
RIGHT ANGLE TUBE SOCKETS

Type A

Type AX



Type B



Type BX

Ordering Example: RA7A = (Type 7 Pin Socket)

Available in 7-pin and 9-pin types in four styles, these sockets are designed to meet existing MIL Specifications. Active contacts are silver plated and non-fatiguing contact pressure provides proper insertion and withdrawal pressure with a minimum of contact resistance. Ideal for hand or mechanical insertion into printed-wiring boards using simple in-line punched round holes. Templates are furnished with each socket. Long terminals permit use of sockets on wide range of board thickness.

Type A — for general purpose applications.
Type AX — for special applications (military and commercial) where extra strength and rigidity are required.
Type B — same as Type A except tube shield shell added.
Type BX — same as Type AX except tube shield shell added.

RA 7 — 7 pin right angle tube socket. RA 9 — 9 pin right angle tube socket

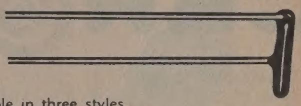
CERAFIL®

INDUSTRIAL CERAMIC CAPACITORS
ULTRAMINIATURE CAPACITORS
DIPPED-RADIAL & AXIAL LEADS
MOLDED-AXIAL LEADS



Cerafil® capacitors are the smallest ceramic capacitors available anywhere. These remarkably ultra-miniature units are designed primarily for air-borne and space-borne equipments, having critical space and weight parameters. They are also designed for transistorized circuit applications in hearing aids and other critical requirements where space and weight are at an absolute premium. The unique design and construction features of Cerafil® capacitors make it possible to obtain extremely high capacities per unit volume. These tiny capacitors are the ideal answer to many problems created by the growing trend towards miniaturization of electronic assemblies and equipments.

When tested using Cerafil® ratings, these units will meet or surpass the requirements of MIL-C-11015C.

All 29 stock values are available in three styles.

1. C80V dipped axial leads (Also referred to as C80A or C80T)
2. Dipped radial lead units (Also referred to as C80R)
3. Completely new molded MC80V

The new molded unit features a rugged epoxy encapsulation which provides an even greater degree of reliability to the already missile proven Cerafil®. Increased mechanical strength and the uniform dimensions make the molded Cerafil® ideal for automated assembly operation.

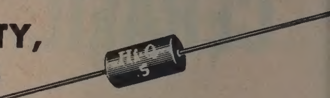
INDUSTRIAL CERAMIC CAPACITORS (cont.)

CEROL® HIGH CAPACITY, HIGH RELIABILITY, ROLLED CERAMIC CAPACITORS



Cerol®capacitors are rolled ceramic capacitors in the high capacitance range of paper and plastic film dielectrics but in much smaller physical sizes and with superior electrical characteristics. Designed for general applications in bypass-coupling, filtering and blocking circuits. Excellent electrical characteristics for critical applications in decoupling and pulse circuits where low series resistance at high frequencies together with miniature sizes are required. Low series resistance makes them ideal for use in all computer circuits. Operating temperature range at rated voltage —55°C to 85°C and at 50% rated voltage —55°C to 125°C. Capacitance tolerance is ±20%. Will meet or surpass all the requirements of MIL-C-11015B.

Cerol capacitors are available in three types; type CR89, CR90 and CR91 rated at 50V, 100V and 200V respectively at 85°C and derated by 50% at 125°C.

Units are stamped with the rated voltage for identification of type.

Hi-Q Feed-Thru Capacitors Eyelet Type are the ultimate in miniaturization because of unique design. This design is such that the capacitors can be soldered directly to a chassis and provide excellent bypass performance where space is critical. The low inductance characteristics brought about through the construction of the capacitors make the eyelet type ideal for high frequency bypass.
